STATISTICAL DIGEST 64

FISHERY STATISTICS OF THE UNITED STATES 1970

Prepared by
STATISTICS AND MARKET NEWS DIVISION
Hoyt A. Wheeland, Chief

PUBLISHED BY NATIONAL MARINE FISHERIES SERVICE/WASHINGTON/1973
PRINTED BY U.S. GOVERNMENT PRINTING OFFICE, WASHINGTON

ACKNOWLEDGMENTS

The data in this edition of "Fishery Statistics of the United States" were collected in co-operation with the various States and tabulated by the staff of the Statistics and Market News Division under the direction of Hoyt A. Wheeland. The material was prepared for publication by Thelma I. Bell and Susan Flint. Field surveys were supervised by the various regional and area offices. Program leaders in charge of field surveys were: Francis Riley for the New England, Middle Atlantic, Chesapeake, Great Lakes, and northern Mississippi River States; George Snow for the South Atlantic, Gulf, and southern Mississippi River States; James R. Bybee, California; Victor J. Samson, Washington and Oregon; Henry Jimmie, Alaska; and Robert Iverson, Hawaii.

The cooperation of the many contributors is gratefully acknowledged. Contributors are given credit for their information in the section of the report in which the data appear.

PREFACE

This report contains a review of the fishery statistics for the year 1970. These statistics include data on the volume and value of landings of fishery products, employment in the fisheries, quantity of gear operated, number of fishing craft employed in the capture of fishery products, information on the volume and value of the production of processed fishery products, data on freezings and cold storage holdings, and on foreign trade in fishery commodities.

Data on employment of fishermen, fishing craft and gear in the fisheries, and on the landings of fish, shellfish, and other aquatic plants and animals, are shown for States having commercial fisheries. There is also information on the pack of canned tuna and industrial products for Puerto Rico and American Samoa included in the processed products tables. In Section 11, Puerto Rico landings data are also shown.

In all of the landings tables in this report, except the one on page 42 entitled, "U.S. Landings, 1970-Live Weight Basis," the volume of fish, crustaceans, and such mollusks as squid is shown in round (live) weight. However, the weights shown for univalve and bivalve mollusks (conchs, clams, oysters, scallops, etc.) represent the weights of meats, excluding the shell. The weight of shells omitted from the catch in 1970 amounted to about 1.2 billion pounds. It should be noted, however, that the data in the table on page 43 "World Landings of Fish, Crustaceans, Mollusks, etc., by Countries" are shown on a live weight basis.

All appropriate records collected by the various State fishery agencies were used in assembling data on the fisheries. In certain areas, information complete enough to be used by the statistical agents was available from State agencies, and in these States, only partial surveys were conducted. Information on the means of collecting the data and an explanation of terms used may be found in Section 13 of this publication.

Complete statistical surveys covering the fisheries of the United States were conducted in all areas for 1970. The first complete survey of the fisheries of the United States was made by the Bureau of the Census for 1908. Others were made by the Bureau of Fisheries and the Fish and Wildlife Service for the years 1931, 1950, 1954-60, and 1962-69.

SECTION 1 - GENERAL REVIEW

The commercial fisheries of the United States yielded a harvest of 4.9 billion pounds worth a record \$613.1 million--an increase of 580.4 million pounds (13 percent) and \$86.6 million (16 percent) compared with 1969. Landings were the best since 1962, the record year. There were record landings of Gulf menhaden, shrimp, yellowfin tuna, Pacific anchovies, surf clams, Dungeness and snow crabs, American (northern) and spiny lobsters; and near-record landings of albacore tuna. Landings of Atlantic menhaden, salmon, spot, and blue crabs also increased significantly compared with 1969. Declines occurred, however in landings of alewives, haddock, sea herring, jack mackerel, mullet, and sea scallops.

Fishermen took 898.3 million pounds of shellfish worth \$286.1 million, an average of nearly 32 cents per pound--slightly less than in 1969. Shellfish accounted for 47 percent of the value, but only 18 percent of the volume of U.S. landings. The value of shellfish exceeded the value of finfish in the New England, Middle Atlantic, Chesapeake, South Atlantic, and Gulf States.

Disposition of landings. In 1970, as in the previous year, landings for human food (2.5 billion pounds) exceeded the quantity taken for industrial products (2.4 billion pounds). NMFS statisticians estimate that the 1970 landings were used as follows: 2,537 million pounds (round weight) for human food--of which 1,479 million were used fresh and frozen, 987 million were canned, and 71 million were cured; and 2,380 million pounds for industrial purposes--of which 116 million were used fresh or frozen, 163 million were canned, and 2,101 million were reduced into meal, oil, and solubles. In addition to the latter items, the quantity processed into industrial products includes fish used for bait, fed to fur-bearing animals and pets, and manufactured into such items as shell buttons, and pearl essence and novelties.

Per capita consumption. The per capita consumption of commercially caught fish and shellfish in the United States was 11.8 pounds (edible weight)--compared with 11.2 in 1969.

Per capita consumption of commercially caught fish and shellfish, 1961-70

(Edible weight)

Year	Pounds	Year	Pounds
1961	10.7	1966	10.9
1962	10.6	1967	10.6
1963	10.7	1968	11.0
1964	10.5	1969	11.2
1965	10.9	1970	11.8

Note:--Data have been revised for 1963, 1966, 1967, and 1969.

Principal States. Louisiana again led the Nation in volume of landings with 1.1 billion pounds--23 percent of the U.S. landings. California was next with 702.7 million pounds, followed by Virginia, 550.6 million; Alaska, 545.3 million; Mississippi, 301.0 million; and Massachusetts, 286.9 million pounds. These six States had 71 percent of the U.S. landings.

Alaska led all States in exvessel value of landings with \$96.1 million--16 percent of the value of the Nation's landings. California was next with \$86.4 million, followed by Louisiana, \$62.5 million; Texas, \$53.6 million; Massachusetts, \$47.0 million; and Florida, \$43.3 million. These six States accounted for 63 percent of the exvessel value of landings.

Principal ports. San Pedro, Calif., led all ports in volume of landings with 496.4 million pounds. Cameron, La., was next with 354.4 million pounds, followed by Pascagoula-Moss Point, Miss., 241.3 million; Dulac-Chauvin, La., 209.0 million; Empire, La., 152.5 million; and Kodiak, Alaska, 145.3 million pounds. Boston, Mass., continuing the downward trend of recent years was 16th in volume of landings. In 1932, it was the Nation's leading port.

Processed products. The production of processed fishery products (canned, packaged fresh and frozen, cured, and industrial) in the United States, American Samoa, and Puerto Rico was worth a record \$1.7 billion--16 percent greater than in 1969, the former record year. Packaged fresh and frozen products were 46 percent of the total value; canned, 43 percent; industrial, 6 percent; and cured, 5 percent. The Pacific Coast States led with products valued at \$579.7 million; followed by the Gulf States with \$325.7 million; New England, \$246.5 million; and Middle Atlantic States, \$139.5 million. In 1970, the 3,735 wholesaling and processing establishments had 86,813 employees.

Menhaden. Landings of 1,837 million pounds of menhaden were 292.0 million more than in 1969, and the best harvest since the record 2,348 million pounds taken in 1962. Record landings of 1,209 million pounds in the Gulf States and a marked gain in landings along the Atlantic coast largely accounted for the greater production. Compared with 1969, landings increased sharply in the New England and Chesapeake States but declined in the Middle Atlantic and South Atlantic States.

The improved landings were reflected in the production for industrial use. Compared with 1969, the production of menhaden meal (188,600 tons) increased 29,100 tons and was 70 percent of the total domestic production. The 186.3-million-pound production of menhaden oil increased 37.1 million compared with 1969, and was 90 percent of the domestic production.

Salmon. Landings were 412.4 million pounds worth a record \$99.0 million--an increase of 143.4 million pounds and \$36.1 million compared with 1969. Alaska landings of 346.5 million pounds worth \$68.0 million accounted for 84 percent of the total salmon harvest and 69 percent of the total value. A sharp increase in red salmon landings in Alaska and near-record silver salmon landings in Washington and Oregon were the principal reasons for the greater production.

The pack of canned salmon was 3,822,200 standard cases worth a record \$138.7 million--a gain of 1,271,300 cases and \$48.4 million compared with 1969. It was the largest pack since 1966. The increase was principally in Alaska where the pack of 1,705,500 cases of red salmon was almost 1 million cases more than in 1969. The pack of pink salmon in Alaska (1,328,500 cases) also improved markedly compared with the previous year. Alaska had 93 percent of the canned pack of salmon and 90 percent of the value.

Tuna. Landings by the U.S. fleet at ports in continental United States and Hawaii were 393.5 million pounds worth a record \$75.0 million--68.6 million pounds (21 percent) and \$20.1 million (37 percent) more than in 1969. The average price per pound received by fishermen for albacore, bluefin, skipjack, and yellowfin tuna increased sharply compared with 1969 and largely accounted for the record value.

The production was second only to the record harvest of 403.4 million pounds taken in 1950. The near-record volume in 1970 was caused principally by record landings of 237.4 million pounds of yellowfin tuna. Also contributing to the increase were skipjack tuna landings of 84.2 million pounds (up 62 percent compared with 1969) and albacore tuna landings of 56.1 million pounds (up 17 percent). Landings of bluefin tuna, however, declined substantially compared with 1969.

The pack of canned tuna was a record 22.1 million cases worth a record \$380.6 million--an increase of 10 percent in volume and 28 percent in value compared with 1969. Canned tuna available for consumption in 1970 (U.S. pack from domestic landings plus U.S. pack from imported

GENERAL REVIEW

tuna and imported canned) was a record 509.9 million pounds. About 40 percent of the U.S. supply was packed from domestic landings--slightly more than in 1969.

Per capita consumption of canned tuna, which was 2.0 pounds in 1960, reached 2.5 pounds in 1970.

Shrimp. Landings of a record 367.5 million pounds (heads-on) worth a record \$129.8 million were 48.9 million pounds (15 percent) and \$5.3 million (4 percent) more than in 1969. Contributing substantially to the greater production were Pacific Coast landings of 92.9 million pounds (up 49 percent) and Gulf States landings of 230.5 million (up 15 percent). In the Pacific Coast States, Alaska landings were 80 percent of the total. The shrimp fishery in Alaska has trended sharply upward since 1959 when landings were 13.1 million pounds--at that time a record harvest. In the Gulf States, landings exceeded 200 million pounds for the fourth consecutive year. However, New England landings (23.5 million pounds) declined 17 percent compared with 1969, and South Atlantic States landings (20.6 million) declined 25 percent. The exvessel value of landings increased in all areas except the South Atlantic States.

Crabs. Landings of crabs, all species, were 277.2 million pounds worth \$39.2 million--a gain of 19.9 million pounds but a decrease of \$3.9 million compared with 1969. Hard blue crab landings increased sharply--from 132.3 million pounds in 1969 to 145.4 million in 1970. Catches improved in all areas. Record landings of both Dungeness crabs (58.5 million pounds) and snow crabs (14.5 million) also contributed substantially to the greater volume. The harvest of king crabs (52.1 million pounds), however, was the smallest since 1961, and landings of soft blue crabs (2.7 million) declined 41 percent. The decline in exvessel value reflected a decline of about 2 cents in the average price per pound received by fishermen for landings of Dungeness, king, and hard blue crabs.

Anchovies. Record landings of anchovies in California were 192.5 million pounds--a gain of 57.2 million (42 percent) compared with 1969, the former record year. In 1970, greater fishing effort, early season price agreement, and favorable market prices for anchovy meal contributed to the increased landings. The anchovy fishery (used principally for reduction to meal and oil) was in its sixth consecutive year.

Flounders. Landings of 168.5 million pounds worth \$23.1 million were 6.3 million pounds and \$3.2 million more than in 1969. Flounder landings on the Pacific coast (46.0 million pounds) declined 3 percent compared with 1969. On the Atlantic and Gulf coasts the flounder production was 122.5 million pounds--a 7-percent gain over 1969. Landings of blackback (24.3 million pounds), fluke (5.7 million), and yellowtail flounders (71.3 million pounds) all increased moderately compared with 1969. Yellowtail flounder landings were 60 percent of the Atlantic and Gulf flounder harvest. Overfishing of the yellowtail flounder resource by both domestic and foreign fleets during recent years has led the International Commission for the Northwest Atlantic Fisheries (ICNAF) to recommend proposed regulations for member nations fishing the resource. Beginning in 1971, the fishery will be regulated by closed seasons, catch quotas, and minimum mesh size of trawls.

Groundfish. The Atlantic fishery for groundfish (cod, cusk, haddock, white hake, pollock, and ocean perch) yielded 149.6 million pounds worth \$15.6 million--a decline of 22.7 million pounds and \$157,000 compared with 1969. Haddock landings of 26.9 million pounds were 18.9 million less than in 1969 and the principal cause of the decline. The haddock production was the smallest on record. Results of a survey made by the NMFS research vessel, Albatross IV, showed that haddock will probably not be plentiful for at least another 3 or 4 years--particularly on Browns or Georges Banks, formerly among the most productive haddock fishing grounds. As conservation measures, ICNAF instituted catch quotas and closed seasons for both fishing areas. Compared with 1969, landings of three other groundfish species declined. The cod harvest of 53.2 million pounds was 7 percent less than in 1969. Landings of pollock (8.8 million pounds) and ocean perch (55.3 million) also declined slightly. Cusk and white hake were the only species landed in greater volume than in 1969.

GENERAL REVIEW

Clams. Record landings of 99.2 million pounds of clam meats worth a record \$28.8 million were 18.5 million pounds and \$3.6 million more than in 1969, the former record year. The volume increase was caused principally by record landings of surf clams in both the Middle Atlantic and Chesapeake States. Soft clam landings in these two areas, together with a small New England production, accounted for 68 percent of the total clam harvest. Landings of hard clams (16.0 million pounds) and soft clams (12.9 million pounds) were about the same as in 1969, and together accounted for 29 percent of the total clam production.

Sea herring. Landings of 88.6 million pounds were 3 percent less than in 1969. The entire decline was along the Atlantic coast where landings were 66.8 million pounds--compared with 69.2 million in 1969. Landings in Maine, for many years the mainstay of the sea herring fishery, were only 36.6 million pounds--17.6 million less than in 1969, and the third smallest harvest since the turn of the century. Massachusetts, however, had the largest landings (27.4 million pounds) since 1908. Pacific coast landings of 21.8 million pounds improved slightly because of increased production in Alaska where the fish are used for reduction to meal or for bait.

Imports of fresh Canadian sea herring, which are used principally for canning and reduction in Maine, were 78.5 million pounds--a decrease of 16.1 million compared with 1969, and of 87.3 million pounds compared with 1968. The Maine pack of sardines canned from sea herring (806,500 standard cases worth \$11.2 million) declined 23 percent in volume and 2 percent in value compared with 1969.

Alewives. The harvest of 69.5 million pounds was 17.7 million less than in 1969, principally because of sharp declines in landings along the Atlantic coast. Landings in the Chesapeake States (21.1 million pounds) declined 38 percent and in the South Atlantic States (11.6 million) 47 percent compared with 1969. Landings increased slightly in all other areas, but chiefly in the Great Lakes where the production of 33.5 million pounds of alewives (taken entirely in Lake Michigan) was 4.2 million more than in 1969. The Great Lakes landings accounted for 48 percent of the entire U.S. production of alewives in 1970.

Halibut, Pacific. Landings by the combined United States and Canadian halibut fleets were 54.9 million pounds (dressed weight)--6 percent less than in 1969. For the third consecutive year, Canadian fishermen landed more halibut (53 percent of the production) than United States fishermen.

Alaska landings were 82 percent of the total U.S. harvest. As halibut receipts increased at Kodiak and other Alaska ports, they declined to an alltime low at Seattle, Wash. The pattern of landings changed principally because Alaska firms began paying fishermen prices that competed with the higher prices traditionally offered at Seattle. Most fishermen preferred to deliver halibut to ports near the fishing areas and to make additional fishing trips in the time formerly lost in the long run to Seattle. Halibut prices continued firm in 1970 until the end of the season when mounting inventories of frozen halibut caused a sharp decline in exvessel prices.

Oysters. The harvest of 53.6 million pounds of meats worth \$29.5 million was 3 percent more in volume and 7 percent more in value than in 1969. Sharp increases in landings in the Chesapeake and Pacific Coast States and slighter increases in the New England and Middle Atlantic States contributed substantially to the greater production. In the South Atlantic and Gulf States, however, landings declined markedly compared with 1969. Landings of 1.6 million pounds in the South Atlantic States decreased to an alltime low. In the Gulf States, landings of 17.7 million pounds were 10 percent less than in 1969 and the smallest since 1966. The oyster fishery in the Gulf States had been decimated by hurricane Camille in 1969, and the oyster reefs along the coasts of Alabama, Mississippi, and Louisiana had not fully recovered from the devastating effects of the hurricane.

GENERAL REVIEW

Whiting. Landings of 44.5 million pounds worth a record \$3.9 million increased 2 percent in volume and 47 percent in value compared with 1969. New England landings accounted for 90 percent of the volume and 87 percent of the value. When the season opened, New England fishermen received 10 cents per pound for whiting--compared with the average price of 5.5 cents per pound paid in 1969. The sharp increase was caused principally by the unusually small landings and consequent short supply in 1969. Plant owners were willing to pay high prices for whiting in order to replenish depleted inventories. In 1970, the New England price finally stabilized at an average price of 8.4 cents per pound.

Lobsters. Landings of American (northern) lobsters were a record 34.2 million pounds worth a record \$33.5 million--a gain of 365,000 pounds and \$4.5 million compared with 1969. New England landings of 30.4 million pounds were slightly less than in 1969, but the Middle Atlantic and Chesapeake States had record harvests. A small quantity was also landed in the South Atlantic States for the fourth consecutive year. Lobster fishermen received an average price of 98 cents per pound--compared with 86 cents in 1969. The United States domestic landings of American lobsters plus imports from Canada increased from 51.2 million pounds in 1969 to 51.3 million in 1970--the best available supply since 1964.

Landings of spiny lobsters were a record 10.3 million pounds worth a record \$6.3 million--an increase of 1.6 million pounds and \$22,000 compared with 1969. Record landings of 7.1 million pounds in the Gulf States accounted for the greater production. The harvest declined in all other areas.

Sea scallops. Landings of 7.3 million pounds of meats worth \$9.4 million declined 22 percent in volume and 3 percent in value compared with 1969. The harvest was far less than the record 27.5 million pounds taken 10 years earlier. Landings declined in all areas. In the New England States, always foremost in the sea scallop fishery, landings of 4.5 million pounds were 13 percent less than in 1969, and the smallest production since 1945. During the 1946-50 period, landings of sea scallop meats at New England ports, chiefly New Bedford, averaged 12.6 million pounds annually; during 1951-55, they averaged 16.5 million; 1956-60, 19.0 million; 1961-65, 18.0 million; and 1966-70, 7.4 million pounds.

Record imports of 16.8 million pounds (principally from Canada) were 18 percent greater than in 1969. They supplied 70 percent of the total quantity of sea scallops available in the United States (24.1 million pounds)--compared with 61 percent in 1969.

High-seas fishery. U.S. fishermen landed 403.8 million pounds of fish and shellfish taken on the high seas off the coasts of foreign countries. Landings in the Pacific Coast States of 353.7 million pounds accounted for 88 percent of the total. The 324.0-million-pound landings of tuna taken off Central and South America increased 58.5 million compared with 1969. The tuna harvest was 80 percent of the total U.S. landings off foreign coasts and 82 percent of the total domestic tuna landings.

Whales. In 1970, the U.S. Department of the Interior placed eight species of whales on the endangered species list--reflecting a mounting national concern over the prediction of biologists that certain species are approaching extinction. The endangered whales were the bowhead, blue, humpback, right, gray, fin or finback, sei, and sperm. The last three were the only species sought recently by U.S. commercial whalers. Only one whaling station, located in California, was active in 1970. The catch numbered 73 whales--110 less than in 1969. There were 5 fin, 4 sei, and 64 sperm whales taken in 1970.

GENERAL REVIEW

Fishery imports. Fishery products imported for consumption were worth a record \$1.0 billion, and exports were worth a record \$117.5 million--an increase of \$193.1 million in imports and \$13.0 million in exports compared with 1969. Imports of edible fishery products were a record 1.9 billion pounds worth a record \$812.5 million--10 percent more in volume and 15 percent more in value than in 1969. The greater volume resulted principally from increased receipts of fresh and frozen albacore and yellowfin tuna (including loins and discs), fillets and steaks (including groundfish and other than groundfish), oysters, and scallops; canned sardines in oil, anchovies and sea herring in oil and not in oil, and unclassified fish not in oil; and pickled or salted sea herring. Record shrimp imports of 218.7 million pounds worth \$200.0 million (including fresh and frozen, canned, and cured) entered U.S. ports in 1970. Shrimp was the major item imported with respect to value--accounting for 25 percent of the value of imported edible items. The following items declined in volume in 1970: fresh and frozen sea herring and spiny lobsters and canned oysters and oyster juice.

Imports of nonedible fishery products were worth \$224.9 million--a gain of \$85.4 million compared with 1969. The principal increase was in imports of fish and marine animal oils and of other nonedible fish, shellfish, and marine animal products.

U.S. supply. The total quantity of fishery products available in the United States (domestic landings plus imports) on a round-weight basis declined from 11.8 billion pounds in 1969 to 11.5 billion in 1970--principally because of a decrease, for the second consecutive year, in imports of fish meal. U.S. landings were 4.9 billion pounds--compared with 4.3 billion in 1969. Imports of 6.6 billion pounds accounted for 57 percent of the total--compared with 63 percent in 1969 and 76 percent in 1968. The quantity of edible fishery products available was 6.2 billion pounds--imports accounted for 59 percent of this amount.

World landings. World landings of fish, crustaceans, mollusks, and other aquatic organisms were a record 152.8 billion pounds (live weight)--an increase of 10 percent compared with 1969. Peru, for the ninth consecutive year, led all nations in volume of fishery landings, followed by Japan, Soviet Russia, China (Mainland), Norway, and the United States. These six nations accounted for 59 percent of world landings in 1970.

Other information. Summaries of landings statistics for certain States have been published previously in the Current Fishery Statistics series of bulletins. A preliminary review titled "Fisheries of the United States," available each April, contains current information on many aspects of the fisheries such as domestic and world landings, per capita consumption, price indexes, foreign trade, and supplies, together with comparative data for the previous year. "Fisheries of the United States" is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

GENERAL REVIEW

U.S. LANDINGS, 1970 - LIVE WEIGHT BASIS

In the annual digest it has been the practice of the NMFS to show the landings of univalve and bivalve mollusks on the basis of the weight of meats. Insofar as possible, all other fish and shellfish items are shown on a live weight basis.

Since world fishery statistics published by the Food and Agriculture Organization of the United Nations represent the live weight of landings of all items of fish and shellfish, it has been necessary to provide that organization with information on domestic landings of all species on a live weight basis. Data released by the Food and Agriculture Organization, therefore, indicate that U.S. landings in 1970 were 1.2 billion pounds greater than the figure appearing in NMFS publications. The increase is due to the inclusion of the weight of the shells of univalve and bivalve mollusks in the Food and Agriculture Organization data.

Data are included in this report showing the entire domestic landings on a live weight basis. Information is also included on landings of fishery products in the principal countries of the world so that the relative importance of the domestic fisheries can be determined. Tables containing these data follow:

WORLD LANDINGS OF FISH, CRUSTACEANS, MOLLUSKS, ETC., BY COUNTRIES, 1970

World landings of fish, crustaceans, mollusks, and other aquatic organisms (live weight) were a record 152.8 billion pounds--an increase of 10 percent compared with 1969.

Six nations accounted for 59 percent of world landings in 1970. Peru, with 18.2 percent, led for the ninth consecutive year followed by Japan with 13.4 percent; the Union of Soviet Socialist Republics, 10.5 percent; China (Mainland), 8.4 percent; Norway, 4.3 percent; and the United States, 4.0 percent.

Among the continents, Asia had 38 percent of the world landings, followed by South America with 21 percent; Europe, 17 percent; Soviet Russia, 11 percent; North and Central America, 7 percent; and Africa, 6 percent. A negligible quantity was taken in Oceania.

GENERAL REVIEW

PROCESSED FISHERY PRODUCTS, 1970

The production of processed fishery products (canned, packaged fresh and frozen, cured, and industrial) in the United States, American Samoa, and Puerto Rico was worth a record \$1.7 billion--16 percent greater than in 1969, the former record year. Packaged fresh and frozen products were 46 percent of the total value; canned, 43 percent; industrial, 6 percent; and cured, 5 percent. The Pacific Coast States led with products valued at \$579.7 million; followed by the Gulf States with \$325.7 million; New England, \$246.5 million; and Middle Atlantic States, \$139.5 million. In 1970, the 3,735 wholesaling and processing establishments had 86,813 employees.

The pack of canned fishery products was 46.2 million standard cases (1.3 billion pounds) worth \$741.8 million to the packers--an increase of 5.4 million cases (177.6 million pounds) and \$166.2 million compared with 1969. The gain resulted principally from record packs of canned tuna, shrimp, and animal food and greater packs of salmon, crab meat, and clams and clam products. The value of three items--salmon, tuna, and animal food--accounted for 84 percent of the total value received by the packers.

Fresh and frozen packaged fish and shellfish (filets and steaks, fish sticks and portions, shrimp and other shellfish products, specialty dinners, etc.) was valued at \$800.3 million in 1970--compared with \$756.8 million in 1969.

Cured fishery products were 70.9 million pounds worth \$76.9 million--an increase of 2.6 million pounds and \$10.6 million compared with 1969.

Industrial fishery products were valued at \$99.5 million--\$16.5 million more than in 1969. A sharp increase in production of marine animal scrap and meal and marine oil (chiefly menhaden) accounted largely for the gain.

Some processed fishery products have been manufactured from raw products imported from foreign countries and therefore cannot be correlated directly with domestic landings. Certain items, such as salted alewives and mild-cured salmon, are shown in an intermediate and also in a more advanced stage of processing. The lime and poultry feed processed shell products were processed from live and reef mollusk shells which are not included in the landings statistics.

Data on the production of processed fishery products during 1970 have been published previously in Current Fishery Statistics No. 5883.

NOTE:--EMPLOYMENT IS REPORTED BY EACH PLANT FOR EACH MONTH FOR THE PAYROLL PERIOD THAT INCLUDES THE 12TH OF THE MONTH. EMPLOYMENT FOR THE SEASON IS BASED ON THE GREATEST NUMBER OF EMPLOYEES WORKING DURING THE PAYROLL PERIOD THAT INCLUDED THE 12TH OF EACH MONTH. EMPLOYMENT FOR THE YEAR IS OBTAINED BY ADDING THE NUMBER OF EMPLOYEES RECORDED AS WORKING DURING THE PAYROLL PERIOD THAT INCLUDED THE 12TH OF EACH MONTH, FOR THE YEAR, AND DIVIDING BY 12.

- 1/ INCLUDED WITH UNCLASSIFIED PRODUCTS.
- 2/ INCLUDED WITH FILLET PRODUCTION.
- 3/ THE PACK OF PACIFIC MACKEREL HAS BEEN INCLUDED WITH JACK MACKEREL.
- 4/ THE PRODUCTION OF FREEZE-DRIED PRODUCTS HAS BEEN INCLUDED WITH SUN-DRIED PRODUCTS.

NOTE:--SOME OF THE ABOVE ITEMS HAVE BEEN PROCESSED FROM RAW PRODUCTS IMPORTED FROM FOREIGN COUNTRIES; THEREFORE, THE PRODUCTION CANNOT BE CORRELATED DIRECTLY WITH LANDINGS. CERTAIN ITEMS SUCH AS SALTED ALEWIVES AND MILD-CURED SALMON ARE SHOWN IN AN INTERMEDIATE AND ALSO A MORE ADVANCED STAGE OF PROCESSING. THE LIME AND POULTRY FEED PROCESSED SHELL PRODUCTS WERE PROCESSED FROM LIVE AND REEF MOLLUSK SHELLS THAT ARE NOT INCLUDED IN THE LANDINGS STATISTICS.

CANNED FISHERY PRODUCTS, 1970

The pack of canned fishery products in the United States, American Samoa, and Puerto Rico was 46.2 million standard cases (1.3 billion pounds) worth \$741.8 million to the packers--an increase of 5.4 million cases (177.6 million pounds) and \$166.2 million compared with 1969. The gain resulted principally from record packs of canned tuna, shrimp, and animal food and greater packs of salmon, crab meat, and clams and clam products. The pack of canned Maine sardines, alewives, and mackerel declined compared with 1969.

The pack for human consumption (805.2 million pounds) increased 12 percent and the pack for bait and animal food (540.7 million) increased 20 percent compared with 1969. The value of three items--salmon, tuna, and animal food--accounted for 84 percent of the total value received by the packers. Animal food containing less than 10 pounds of fish per standard case of 48 pounds (4,279,615 standard cases worth \$20,790,648) is not included in these data.

Tuna. The pack of canned tuna was a record 22.1 million cases (437.6 million pounds) worth a record \$380.6 million--a gain of 2.0 million cases and \$83.1 million compared with 1969, the former record year. The Pacific coast led in production with 55 percent of the total, followed by Puerto Rico with 29 percent, and the Atlantic coast, Hawaii, and American Samoa with 16 percent. In 1970, areas other than California accounted for 52 percent of the pack; in 1969, they accounted for only 17 percent. The greater production in Puerto Rico and American Samoa has been the principal reason for the increase.

Salmon. The pack of canned salmon was 3.8 million cases worth \$138.7 million--an increase of 1.3 million cases (50 percent) and \$48.4 million (54 percent) compared with 1969. The combined Washington and Oregon packs (257,700 cases) were 4 percent less than in 1969, but the Alaska pack (3.6 million cases) increased 56 percent. Alaska accounted for 93 percent of the volume and 90 percent of the value of the total pack.

Shrimp. The pack of canned shrimp was a record 3.7 million cases worth a record \$37.3 million--an increase of 651,200 cases and \$9.5 million compared with 1969. The Gulf States led in production with 2.5 million cases--68 percent of the pack; Alaska was second with a record 1.1 million cases--30 percent of the pack. The rest was canned in Maine, Washington, and Oregon.

Clams. The pack of canned clams and clam products was 2.5 million cases worth a record \$25.7 million--an increase of 7 percent in volume and 16 percent in value compared with 1969. The production of whole and minced clams was 580,200 cases worth \$10.2 million--148,100 cases and \$3.3 million more than in the previous year. The production of clam chowder and juice (1.9 million cases worth \$15.4 million) was slightly greater than in 1969.

Sardines. The pack of canned Maine sardines (sea herring) was 806,500 cases worth \$11.2 million--compared with 1.0 million cases worth \$11.5 million in 1969. Sea herring landings in Maine and fresh Canadian sea herring imports into Maine (used principally for canning and reduction) both declined compared with the previous year.

Pacific sardines were not canned in 1970. The California State Legislature, in an effort to conserve the resource, established an indefinite moratorium on sardine fishing in California waters.

Crabs. The pack of canned crab meat was 261,400 cases worth \$10.5 million--an increase of 1 percent in volume, but a decline of 27 percent in value compared with 1969. The composition of the pack by species was somewhat different than in 1969. The pack of blue crab meat in the Atlantic and Gulf areas was 104,300 cases--slightly less than the record 106,800 cases packed in 1969. On the Pacific coast, the pack of king crab meat (55,900 cases) declined for the fourth consecutive year. The king crab pack was 13,700 cases less than in 1969, and 390,100 cases less than the record pack of 1966. The 58,700 cases of Dungeness crab meat packed in 1970 increased 12 percent compared with 1969. The pack of snow crab continued the upward trend begun in 1967 and reached a record 42,500 cases--47 percent more than in 1969.

GENERAL REVIEW

Mackerel. The pack of 188,600 cases of canned mackerel (consisting principally of jack mackerel) was 50 percent less than in 1969, continuing the downward trend that began in 1961. The California State Legislature, in an effort to conserve the dwindling Pacific mackerel resource, approved legislation prohibiting commercial fishing for Pacific mackerel for 2 years. The law became effective in August 1970.

Data on the production of canned fishery products during 1970 have been published previously in Current Fishery Statistics No. 5560.

NOTE:--"STANDARD CASES" REPRESENT THE VARIOUS SIZE CASES CONVERTED TO THE UNIFORM BASIS OF 100 NO. 1/4 OIL CANS (3-3/4 OZ. NET) TO THE CASE. SARDINES WERE CANNED IN 21 PLANTS IN MAINE.

PACK OF PACIFIC SARDINES, 1970

A LAW PASSED BY THE CALIFORNIA LEGISLATURE IN 1967 ESTABLISHED A 2-YEAR MORATORIUM ON THE TAKING OF SARDINES IN CALIFORNIA WATERS, EXCEPTING AN ALLOWABLE 15 PERCENT TOLERANCE FOR SARDINES TAKEN INCIDENTALLY IN MIXED CATCHES OF MACKEREL. IN 1969, THE MORATORIUM ON SARDINE FISHING WAS CONTINUED INDEFINITELY. THERE WAS NO PRODUCTION OF CANNED PACIFIC SARDINES IN 1969-70.

1/ THE PACK OF LIGHTMEAT SOLID HAS BEEN INCLUDED WITH ALBACORE. NOTE:--"STANDARD CASES" REPRESENT THE VARIOUS SIZE CASES CONVERTED TO THE EQUIVALENT OF 48 NO. 1/2-TUNA CANS TO THE CASE, EACH CONTAINING 7 OZ. NET WEIGHT OF SOLID PACK, 6-1/2 OZ. NET WEIGHT OF CHUNKS, AND 6 OZ. NET WEIGHT OF FLAKES OR GRATED. THE PACK OF DIETETIC TUNA IS INCLUDED IN THESE TOTALS. TUNA WERE CANNED IN: 8 PLANTS IN CALIFORNIA, 7 PLANTS IN OREGON, 5 PLANTS IN WASHINGTON, 4 PLANTS IN PUERTO RICO, 2 PLANTS IN AMERICAN SAMOA, AND 1 PLANT EACH IN MARYLAND AND HAWAII. DATA ON THE PACK OF TUNA SPECIALITIES CAN BE FOUND IN THE TABLE "PACK OF MISCELLANEOUS FISHERY PRODUCTS." THE PACK OF TUNA FOR ANIMAL FOOD IS NOT INCLUDED IN THE ABOVE TABLE.

INDUSTRIAL FISHERY PRODUCTS, 1970

The production of industrial fishery products by 127 plants in the United States, American Samoa, and Puerto Rico was valued at \$99.5 million--an increase of \$16.5 million compared with 1969.

Marine animal scrap and meal. The production of 269,197 tons of marine animal scrap and meal was 16,533 tons (7 percent) greater than in 1969. A sharp increase in menhaden meal and scrap--from 159,493 tons in 1969 to 188,550 tons in 1970--was the principal reason for the gain. It was the largest production of menhaden meal since 1962. Compared with 1969, increases also occurred in the anchovy meal production of 16,200 tons (up 42 percent) and the crab meal production of 11,481 tons (up 48 percent). These gains, however, were somewhat offset by a marked decline in production of unclassified species of fish and shellfish: the 1970 yield of 15,438 tons was less than one-half the 1969 production.

Marine animal oil. The production of marine animal oil was 206.8 million pounds--22 percent more than in 1969. Menhaden oil production of 186.3 million pounds increased 37.1 million and accounted largely for the gain. Compared with 1969, production of anchovy and sea herring oil increased substantially, but production of tuna and mackerel oil and unclassified fish oils declined.

Fish solubles. The production of fish solubles was 94,968 tons--16 percent more than in 1969. Menhaden accounted for 76 percent of the production.

Other industrial products. Products from oyster shells were worth \$3.4 million--compared with \$3.3 million in 1969.

Other industrial items produced included agar agar, animal feeds, fish feed pellets, Irish moss extracts, kelp products, leather products, liquid fertilizer, colored chips, pearl essence, crab and clam shells, and mussel shell lime valued at \$26.6 million. These products were valued at \$25.6 million in 1969.

Data on the production of industrial fishery products during 1970 have been published previously in Current Fishery Statistics No. 5561.

GENERAL REVIEW

PACKAGED FISHERY PRODUCTS, 1970

The production of fresh and frozen packaged fish fillets and steaks in the United States, excluding Alaska and Hawaii, was 133.5 million pounds worth \$74.8 million--a decline of 4.1 million pounds but an increase of \$5.4 million compared with 1969. Flounder fillets (46.7 million pounds), Atlantic ocean perch fillets (16.0 million), and cod fillets and steaks (13.6 million pounds) were the leading items. They accounted for 57 percent of the volume and 55 percent of the value. Haddock fillets, rockfish fillets, and halibut fillets and steaks were among the other important leading items. The New England area continued to lead all other areas in the production of packaged fish with 57 percent of the volume and 54 percent of the value.

Data on the production of packaged fish during 1970 have been published previously in Current Fishery Statistics No. 5562.

NOTE:--A FISH PORTION, GENERALLY CUT FROM A BLOCK OF FILLETS, IS A PIECE OF FISH FLESH GENERALLY OF UNIFORM SIZE WITH A THICKNESS OF 3/8 OF AN INCH OR MORE, AND DOES NOT CONFORM TO THE DEFINITION OF A FISH STICK.

GENERAL REVIEW

FROZEN FISHERY TRADE, 1970

The 1970 production of frozen fish and shellfish by firms reporting to NMFS was 388.3 million pounds. Leading products frozen were shrimp (137.2 million pounds); bait and animal food (64.8); fillets and steaks consisting principally of ocean perch, haddock, flounder, and cod (25.4); salmon (23.0); halibut (19.3); and whiting, headed and gutted (15.3 million pounds). An estimated 583.9 million pounds of fish and shellfish (live weight) were required to produce the 388.3 million pounds of frozen fishery items. Not included were freezings by cold storage plants not reporting to NMFS and a considerable volume of frozen fillets and steaks produced by firms operating plate freezers at the end of fillet production lines.

New England led all other areas in freezings with 117.6 million pounds (30 percent of the total); followed by South Central with 113.7 million (29 percent); South Atlantic, 59.1 million (15 percent); Pacific, 56.7 million (15 percent); and Alaska, 37.0 million (10 percent). The Middle Atlantic, North Central East, and North Central West accounted for the remainder.

Information on the freezings and holdings of fishery products for 1970 by firms supplying monthly data on their operations and a list of these firms were published previously in Current Fishery Statistics No. 5525. Data on freezings and holdings were also published in preliminary and final monthly reports, Frozen Fishery Products--also in the Current Fishery Statistics Series.

COLD STORAGE HOLDINGS OF FROZEN FISHERY PRODUCTS, 1970

Holdings of frozen fishery products were highest on October 31, when 313.1 million pounds were in storage. The November 30 holdings of 311.9 million pounds were second highest, followed by the September 30 holdings of 310.3 million pounds. Holdings were lowest April 30, when they totaled only 191.6 million pounds.

COLD STORAGE HOLDINGS OF CURED FISH, 1970

Monthly average holdings of salted and smoked fish were 9.2 million pounds. Cured herring (6.8 million pounds) and mild-cured salmon (1.8 million pounds) accounted for 94 percent of the average cold storage inventories of cured fish.

FOREIGN FISHERY TRADE

U.S. foreign trade in fishery products was worth a record \$1.2 billion--an increase of \$208.2 million compared with 1969. Imports for consumption were worth \$1.0 billion--\$195.1 more than in the previous year. Exports valued at \$117.7 million increased \$13.1 million compared with 1969.

Imports of edible fishery products were 1.9 billion pounds worth \$812.5 million--a gain of 10 percent in volume and 15 percent in value compared with 1969. Important edible items received in greater volume were fresh or frozen tuna (including loins and discs), groundfish fillets and steaks, flounder fillets, shrimp, oysters, scallops, canned sardines in oil, unclassified canned fish (chiefly mackerel), and pickled or salted herring. Compared with 1969, imports of fresh or frozen sea herring, northern and spiny lobster, and canned sardines not in oil declined.

Shrimp, the major item imported with respect to value, accounted for 25 percent of the value of all imported edible items. Record imports of about 218.7 million pounds (including fresh or frozen, canned, and cured) worth \$200.0 million were received from 73 countries. Mexico, India, Panama, Venezuela, and Guyana were among the principal sources. Mexico supplied 33 percent of the total U.S. imports of shrimp.

Imports of nonedible fishery products were valued at \$226.9 million--a gain of \$87.4 million compared with 1969. Increases occurred principally in imports of fish and marine animal oil, aquatic leathers, moss and seaweeds, marine shells and buttons, and other marine animal products such as chemicals and nonmetallic minerals and products.

Exports of domestic edible fishery products were 140.7 million pounds worth \$95.2 million. The value increased 10 percent, but the volume remained about the same as in 1969. Exports of domestic nonedible fishery products were worth \$22.5 million--a gain of \$4.4 million compared with 1969.

Exports of foreign-produced fishery products were valued at \$22.0 million--31 percent more than in 1969. A sharp increase in exports of fresh or frozen shrimp products accounted largely for the gain.

SECTION 2 - NEW ENGLAND FISHERIES

Commercial fishermen operating out of ports in the New England States (Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut) landed 531.3 million pounds of fish and shellfish worth \$91.0 million--a decrease of 37.0 million pounds (7 percent), but a gain of \$10.5 million (13 percent) compared with 1969. Landings of otter trawl-caught industrial fish, haddock, shrimp, cod, and sea herring declined sharply; landings of ocean perch, pollock, and sea scallop meats were slightly less than in 1969. The harvest of blackback and yellowtail flounders, white hake, and soft clam meats increased substantially compared with 1969; landings of alewives, scup, whiting, and bluefin tuna gained moderately. Landings of most other species were about the same as in the previous year. With few exceptions, exvessel prices for fish and shellfish increased for all species. Fishermen were paid a record high average of 17.1 cents per pound in 1970--compared with 14.2 cents in 1969. Average prices per pound paid for haddock, northern lobsters, shrimp, and sea scallop meats had the sharpest gain.

Massachusetts led all States in volume with 286.9 million pounds; followed by Maine, 158.8 million; and Rhode Island, 79.4 million pounds. Compared with 1969, landings were somewhat greater in Massachusetts, but declined in Rhode Island and Maine. Rhode Island landings were down 9.1 million pounds because of smaller landings of industrial fish. In Maine, the 32.5 million-pound decrease resulted from smaller landings of sea herring (sardines), shrimp, ocean perch, and whiting. The value of landings was greater for all New England States except Connecticut, where it was about the same as in 1969. Massachusetts led all States in value of landings with \$47.0 million (51 percent); Maine was next with \$30.7 million (34 percent); and Rhode Island, \$10.9 million (12 percent). New Hampshire and Connecticut together accounted for the remaining 3 percent.

Fishermen and vessels. The New England fisheries had 22,218 fishermen using 686 vessels (5 net tons or greater) and 11,955 other craft--a decline of 9 vessels, but an increase of 2,269 fishermen and 1,155 other craft compared with 1969.

Processed products. The value of processed seafood items was \$246.5 million--an increase of \$20.6 million compared with 1969. Massachusetts led in production with products valued at \$175.8 million, followed by Maine with \$48.9 million; New Hampshire, \$16.9 million; Rhode Island, \$4.7 million; and Connecticut, \$223,000. The five States had 8,960 persons employed in 537 wholesaling and processing plants.

Vessel construction. In 1970, five newly constructed vessels were added to the New England fleet and two more vessels were purchased from outside the region. In addition, the 135-foot steel stern trawler, Tremont, a sistership to the Old Colony, was built in Wisconsin to operate out of Boston for groundfish and flounders. The Tremont and the Old Colony were the newest, most modern, and most efficient vessels in the groundfish fishery. Six vessels were lost at sea, and 15 vessels changed ownership.

Labor. Two ports had labor troubles. In New Bedford, Mass., two labor disputes were settled quickly. One ended without loss of time when a contract that included fringe benefits for fishermen was negotiated between fishermen and vessel owners. The other dispute was between plant owners and workers unloading fishing vessels. It led to a 1-day tieup that ended quickly when the workers received higher wages. In Gloucester, Mass., workers had an 8-week dispute with a stevedoring firm. The firm had imports to unload and finally diverted considerable tonnage to Portsmouth, N.H. In another dispute, shore plant workers in Gloucester were idle for 3 weeks because of a disagreement with management over a new contract.

Groundfish. Landings of six groundfish species (cod, cusk, haddock, ocean perch, pollock, and white hake) were 149.0 million pounds--22.7 million less than in 1969. Despite sharply decreased landings, the value of \$15.5 million was just slightly less than the \$15.6 million fishermen received in 1969. Compared with 1969, landings of only two species improved--cusk and white hake. The production of ocean perch (55.3 million pounds) and pollock (8.8 million) was just slightly less than in 1969. Cod landings, however, declined sharply from 56.9 million pounds in 1969 to 52.7 million in 1970.

The decline of the New England haddock fishery continued. Haddock landings decreased from the 45.8 million pounds taken in 1969 to 26.9 million in 1970--the smallest production on record. The 1963 year class of haddock, one of the largest on record, was overfished by both foreign and domestic fleets in 1965 and 1966. There has been no successful year class since 1963. A survey by the NMFS research vessel, Albatross IV, showed that the 1969 year class of haddock was poor on Georges Bank--the sixth continuous year of markedly low indexes. As a result, haddock will probably not be plentiful for at least 3 years on that Bank. The survey also showed that the abundance of the 1969 year class of haddock on Browns Bank had improved substantially, but because of previous poor year classes the fish were expected to decrease during the next 3 to 4 years. As conservation measures, the International Commission for the Northwest Atlantic Fisheries (ICNAF) instituted catch quotas and closed seasons on Georges and Browns Banks.

Imports of groundfish fillets (including blocks) were a record 458.8 million pounds--32.0 million (8 percent) more than in 1969, the former record year. The available supply (U.S. production plus imports) of groundfish fillets and blocks in the United States was a record 501.7 million pounds--a gain of 27.7 million compared with 1969. U.S. production of 42.9 million pounds was only about 9 percent of the total amount available for consumption. In 1950, U.S. production was 67 percent of the total.

Flounders. Landings were 103.9 million pounds worth \$15.4 million--a gain of 4.2 million pounds and \$2.1 million compared with 1969. All species increased in volume except dab and fluke. Black-back flounder production increased from 20.9 million pounds in 1969 to 22.3 million in 1970. Yellowtail flounder landings of 67.3 million pounds worth \$9.9 million increased 4 percent in quantity and 16 percent in value compared with 1969. Yellowtails accounted for 65 percent of the volume and 64 percent of the value of the total flounder production. The yellowtail flounder resource, however, has been overfished by both domestic and foreign fleets during the last several years. Accordingly, ICNAF has recommended proposed regulations for member nations fishing the resource. Beginning in 1971, the fishery will be regulated by closed seasons, catch quotas, and trawl mesh size regulation.

Sea herring. The herring industry had a poor year. Landings of 66.3 million pounds declined 3 percent compared with 1969. In Maine, where sea herring are used principally to pack canned sardines, landings declined sharply from 54.2 million pounds in 1969 to 36.6 million in 1970. It was the smallest harvest since 1938, and far below the record 185.5 million pounds landed in Maine in 1950. Fishing was poor in the Gulf of Maine, and canneries did not operate at full capacity during the year. The pack of Maine sardines was 806,500 standard cases worth \$11.2 million--compared with 1,042,800 cases worth \$11.5 million in 1969. The pack was the smallest since 1938. Twenty-one canneries packed sardines in 1970--the same number as in 1969. Imports of sea herring from Canada into Maine ports were 78.5 million pounds--compared with 94.5 million in 1969 and 165.8 million in 1968.

In 1970, the Maine Sardine Council made a grant to The Research Institute of the Gulf of Maine (TRIGOM) for a joint study with the Maine Medical Center on the effect of environmental conditions on the habits, supply, and movement of herring along the Maine coast. The study will supplement the biological research carried on by State and Federal agencies during the past 25 years.

Sea herring landings in Massachusetts increased from 9.9 million pounds in 1969 to a near-record 27.4 million in 1970. Most of the catch was taken from Jefferys Ledge. About one-third of the catch was cut into butterfly fillets and exported frozen to Europe. The rest of the catch was made into meal and oil. In addition to the domestic landings, about 23.4 million pounds were taken by foreign vessels outside the U.S. 12-mile limit and transferred to U.S. carrier vessels for delivery to domestic fish meal plants. Such shipments are treated as duty-free imports by Bureau of Customs regulations.

Unclassified industrial fish. Landings of unclassified species of fish for processing into fish meal and oil were 51.6 million pounds--compared with 72.8 million in 1969. Nearly 58 percent of the landings were made at Point Judith, R.I., and most of the remainder at New Bedford and Gloucester,

NEW ENGLAND FISHERIES

Mass. In addition to the 51.6 million pounds of unclassified industrial fish reported, about 27.2 million pounds of alewives, menhaden, sea herring, and other species were used for industrial purposes. In 1970, imports of fish meal were down substantially, with a resulting higher exvessel price for raw materials for industrial use.

Whiting. Landings of 40.1 million pounds increased slightly compared with the 39.3 million pounds taken in 1969--the smallest harvest in 30 years. The value was a record \$3.4 million--a 57-percent gain compared with 1969. Principal reason for the sharp increase was that fishermen were paid 10 cents per pound for their catch at the beginning of the season. The high price was a result of the need to replenish inventories depleted by the unusually small landings of the previous year. The average price per pound paid to fishermen was 8.4 cents in 1970--compared with 5.5 cents in 1969. By the end of the year, the industry was becoming concerned about finding a ready market for the high-priced inventory.

Lobsters. Landings of 30.4 million pounds were slightly less than the record 30.7 million taken in 1969. The value, however, was a record \$29.7 million--\$3.5 million more than in the previous year. Compared with 1969, Maine landings (18.2 million pounds) declined 8 percent, but Massachusetts landings (5.7 million) increased 15 percent and Rhode Island landings (a record 5.2 million pounds) increased 22 percent. The offshore fishery for lobsters has developed from about 6 percent of the total landings in 1960 to an estimated 21 percent in 1970. Although most of the offshore production was taken in otter trawls, a deep-water pot fishery had begun to develop. About 1.2 million pounds of offshore lobsters were taken in pots in 1970. One of the major problems of this expanding fishery is that offshore lobster pots are extremely vulnerable to destruction by both domestic and foreign otter trawlers on the same grounds.

An official of the Maine Department of Sea and Shore Fisheries predicted that in its northern range the lobster will be less plentiful from about 1970 to 1975 because the waters are cooling and no longer reach the optimum temperature for the species that prevailed during the 1960's. If this theory is valid, lobster catches should improve near the southern range of the lobster, but decline in New England and the Maritime Provinces.

Shrimp. Landings of 23.5 million pounds worth a record \$4.7 million declined 4.8 million pounds compared with the record landings of 1969, but increased \$1.2 million in value. Maine landings (17.0 million pounds) were 30 percent less than in 1969, but the fishery gained in Gloucester, Mass., where landings were a record 6.4 million pounds--an increase of 64 percent. Fishermen also made small landings in New Hampshire.

The northern shrimp fishery on the Atlantic coast appears to be edging southward. Maine's commercial fishermen have generally harvested the pink shrimp as an inshore winter crop from September or October into April or May. However, exploratory fishing work by NMFS has demonstrated that during the rest of the year the shrimp are in deeper water and within reach of vessels from other coastal States. Thus the traditional shrimping season can be extended to include the summer. As a result, vessels from New Hampshire and Massachusetts fished intensively in 1970.

Sea scallops. Landings of 4.5 million pounds of sea scallop meats worth \$6.0 million declined 640,000 pounds, but increased \$400,000 compared with 1969. The harvest was the smallest since 1945. As landings declined, marginal scallop vessels turned to other fisheries. Many of the vessels remaining in the scallop fishery reduced their crews from 11 to 6 men. Fishing was poor off the Middle Atlantic States--most of the production came from the Georges Bank and Channel areas. Because sea scallops were scarce, fishermen continued using small scallops that in former years would have been returned to the ocean to grow another season.

New construction. Early in 1970, a group of Provincetown, Mass., fishermen, principally small boat owners, were legally incorporated as a fishery cooperative. Starting with only 30 members, the cooperative soon had about 100. Construction began on a building to be used for handling fish--most of them to be trucked to distant markets.

NEW ENGLAND FISHERIES

Construction also began on a breakwater and harbor of refuge for Provincetown--a structure that will be a great asset to the community and to the fishing fleets.

Other information. The following tables contain summarized and detailed information on the 1970 operating units and landings of fish and shellfish in the New England States. Additional data on many aspects of the New England fisheries may be found in Maine, Massachusetts, and Rhode Island monthly and annual landings bulletins released by the Statistics and Market News Division and in daily, monthly, and annual reports published by the NMFS Fishery Market News Service, Commonwealth Pier, Boston, Mass.

Acknowledgments. The following organizations helped collect the data appearing in this section: Maine Department of Sea and Shore Fisheries; New Hampshire Fish and Game Department; Massachusetts Department of Natural Resources, Division of Marine Fisheries; Rhode Island Department of Agriculture and Conservation, Division of Fish and Game; Connecticut State Board of Fisheries and Game; and Connecticut State Shell Fish Commission.

SECTION 3 - MIDDLE ATLANTIC FISHERIES

Commercial landings of fish and shellfish at ports in the Middle Atlantic States (New York, New Jersey, and Delaware) were 140.0 million pounds worth \$29.9 million--an increase of 2.1 million pounds (2 percent) and \$4.4 million (17 percent) compared with 1969. Major species landed in greater quantity than in 1969 were bluefin tuna, bluefish, flounders, lobsters, oysters, and surf clams. Important species that declined in volume were butterfish, menhaden, scup, striped bass, whiting, and sea scallop meats.

New Jersey led in volume with 97.5 million pounds (70 percent) followed by New York with 32.5 million (23 percent), and Delaware, 10.0 million pounds (7 percent). New York led in value of landings with \$16.1 million (54 percent), New Jersey had \$12.5 million (42 percent), and Delaware had \$1.3 million (4 percent).

Fishermen and vessels. The Middle Atlantic States had 8,469 fishermen--35 less than in 1969. There were 455 vessels (5 net tons or more), 3,878 motor boats, and 143 other boats--a decline of 43 vessels and 82 other boats, but an increase of 228 motor boats compared with 1969.

Processed products. The value of processed seafood items in the four-State Middle Atlantic area (including Pennsylvania) was \$139.5 million--an increase of \$7.9 million compared with 1969. New York led with products valued at \$55.7 million; followed by New Jersey with \$34.8 million; Pennsylvania, \$43.4 million; and Delaware, \$5.6 million. There were 5,706 persons employed in 367 wholesaling and processing plants in the four States.

Surf clams. Landings of surf clam meats were a record 52.6 million pounds worth a record \$6.1 million--an increase of 10.4 million pounds and \$1.1 million compared with 1969. The harvest was 17 percent greater than the landings made in 1966, the former record year. Delaware landings increased sharply from 2.8 million pounds in 1969 to a record 8.7 million in 1970.

Fishing effort in the Middle Atlantic States has usually been directed to the remunerative offshore clam fishery. In 1970, however, the vessels fished primarily for the smaller inshore clams because of their abundance. Fishermen also found a better market for their clams than in previous years because packers received them more readily.

In 1970, a newly designed vessel entered the surf clam fishery. The vessel had facilities for shucking clams onboard thereby eliminating the problems of availability of water used in shucking and disposal of sand waste.

Menhaden. Landings of 31.5 million pounds were 12.3 million less than in 1969, and the second smallest harvest on record. The only reduction plant that continued to function was operating on a limited basis. The large purse seiners were no longer used, and landings depended on the smaller local vessels that used purse seines and pound nets.

Flounders. Landings of 10.6 million pounds worth \$1.6 million increased 22 percent in volume and 37 percent in value compared with 1969. New York with landings of 7.3 million pounds accounted for 69 percent of the total production. Yellowtail landings (5.8 million pounds) dominated the Middle Atlantic flounder production. Eighty-one percent of the yellowtail flounders were landed in New York, the rest were in New Jersey. Until 1969, few yellowtails were landed in New Jersey, but in that year and in 1970 landings increased sharply. A new market developed for yellowtail flounders, and a fillet plant in New Jersey took fish that weighed from 3/4 to 1-1/2 pounds. Fluke flounder landings (2.9 million pounds) were second in volume. New Jersey accounted for 69 percent of the fluke harvest; the rest were landed in New York. New York accounted for 92 percent of the 1.8-million-pound landings of blackback flounders. Small quantities of gray sole and lemon sole were also landed in New York and New Jersey.

Hard clams. Landings of 10.6 million pounds of hard clam meats worth a record \$10.6 million increased 7 percent in volume and 11 percent in value compared with 1969. New York fishermen took 7.9 million pounds--75 percent of the total production. New Jersey landings of 2.6 million pounds were 14 percent more than in 1969. One reason for the improved harvest was the March opening of an area formerly closed to clambers. There was also a clam rehabilitation program that helped increase production. Beginning in August, a fisherman could lease 1.5 acres of bottom in unpolluted waters and then transfer 20 bushels of clams per day during a 3-day work week from a polluted area (designated by the State) to the leased area. Fishermen were not permitted to harvest the replanted clams until October.

Scup. Landings of 4.3 million pounds were 18 percent less than in 1969, and the smallest harvest since 1926. Landings have trended downward since the record 26.6-million-pound production of 1960; and in 1966, declined drastically to 8.4 million pounds--about one-half the yield of the previous year. Since that time, landings have dropped at an average annual rate of about 1 million pounds.

In 1970, the value of landings (\$967,000) increased 3 percent compared with 1969. Because scup were scarce, the average exvessel value increased to 22 cents per pound--a gain of 4 cents.

Whiting. Landings of 4.3 million pounds worth \$496,000 declined 27 percent in volume, but increased 3 percent in value compared with 1969. Landings declined for the third consecutive year. In January, the otter trawl fleet operating off the New Jersey coast set a 1-month landings' record of more than 1 million pounds, but during February and March landings decreased by 75 percent compared with February and March 1969. Fishermen received an average price of 11-1/2 cents per pound in 1970--compared with 8 cents per pound in 1969.

Lobsters. Landings were a record 3.5 million pounds worth a record \$3.6 million--an increase of 22 percent in volume and 34 percent in value compared with 1969. The greater landings may have resulted, in part, because of increased use of lobster pots, especially in New Jersey. The average price per pound was \$1.03--about 9 cents more than in 1969.

Tuna. Landings were a record 3.1 million pounds--the best harvest since the inception of the tuna purse seine fishery in 1963. Bluefin tuna landings in New Jersey were 99 percent of the total production. Most of the bluefin tuna catch was taken by three purse seine vessels operating off the New Jersey coast.

Bluefish. Landings of 2.7 million pounds were 48 percent greater than in 1969, and the best production since 1935. New York landings were 60 percent of the total harvest. The value (\$274,000) reflected a slight decline from a 13-cent average price per pound in 1969 to 10 cents in 1970.

Sea trout. The 2.4-million-pound landings of sea trout increased 20 percent in volume compared with 1969, and were the best production since 1957. About 80 percent of the poundage was taken with otter trawls, but an appreciable quantity was taken incidentally by gill netters in the bluefish fishery.

Mackerel. Atlantic mackerel landings of 1.7 million pounds worth \$92,000 increased 113 percent in volume and 67 percent in value compared with 1969. The New Jersey otter trawl production of 1.2 million pounds accounted for 92 percent of the mackerel landings in the State. The fish averaged three-quarters of a pound during the season. The average price per pound in the Middle Atlantic fishery declined from 7 cents in 1969 to 5-1/2 cents in 1970.

MIDDLE ATLANTIC FISHERIES

Striped bass. Landings were 1.6 million pounds worth \$423,000--a decline of 14 percent in volume and 7 percent in value compared with 1969. New York with 1.3 million pounds accounted for 83 percent of the landings. Most of the New York landings were made by haul seines. New Jersey landings of 223,000 pounds were taken principally by otter trawls.

Butterfish. Landings of 1.5 million pounds worth \$262,000 declined 39 percent in volume and 5 percent in value compared with 1969. Fishermen found that the fish were about as plentiful as usual but were considerably smaller than in previous years. Otter trawl fishermen were discouraged by the loss entailed in culling unmarketable small butterfish from the catch. Losses were sometimes as much as 50 percent per trip.

Oysters. Landings of 1.4 million pounds of oyster meats worth \$1.8 million increased 7 percent in volume and 31 percent in value compared with 1969. Landings were the best in New York (520,000 pounds) since 1962 and in Delaware (216,000 pounds) since 1959. However, New Jersey landings (677,000 pounds) were the smallest since 1965. In New York, efforts made by the industry to grow seed and transplant it to areas for oyster growing began to show favorable results. Most of these oysters were sold on the market as half-shell trade and brought good prices to fishermen. In 1970, the average price per pound was \$2.07. Delaware landings were more than four times the production of the previous year. Most of the oysters were taken from the Delaware Bay. In New Jersey, the sharp decline in landings resulted from high mortalities caused by borers and the MSX disease, unfavorable weather at times of peak demand, poor recovery of meats, and lack of shuckers at fish processing plants.

Hard blue crabs. Landings of 1.4 million pounds were worth \$220,000--an increase of 20 percent in quantity and 52 percent in value compared with 1969. In 1970, the average price per pound was 16 cents--about 3 cents more than in 1969. The fishery is confined to New Jersey and Delaware. Delaware Bay is the principal area for hard blue crab production. In 1970, 92 percent of the landings were taken there by pot fishermen from both States.

Sea scallops. Landings of 635,000 pounds of sea scallop meats worth \$835,000 decreased 30 percent in volume and 15 percent in value compared with 1969. Landings were the smallest since 1944. Fishing effort declined as the available stock of sea scallops dwindled. Exvessel prices averaged \$1.31 per pound--a gain of 23 cents per pound compared with 1969.

Bay scallops. Landings of 365,000 pounds of bay scallop meats worth \$470,000 were 47 percent greater in quantity and 25 percent greater in value than in 1969. The bay scallop fishery is confined to New York. Most of the production came from bays on the eastern end of Long Island. An abundance of grass in Great South Bay made dredging difficult, and most fishermen left it to enter the high-priced hard clam fishery.

Other information. Additional data may be found in the New York and New Jersey monthly and annual landings bulletins published in the Current Fishery Statistics Series by the Statistics and Market News Division in cooperation with the respective States. Information on daily, monthly, and annual production of fishery products in selected areas of these States is available in reports published by NMFS's Fishery Market News Service in New York City.

Acknowledgments. The following organizations helped collect the data appearing in this section: New York Conservation Department, Marine Fisheries Division and Division of Fish and Game; New Jersey Conservation Department, Division of Fish and Game, and New Jersey Shellfish Commission; and State of Delaware Commission of Shellfisheries.

MIDDLE ATLANTIC FISHERIES

HUDSON RIVER SHAD FISHERY

The Hudson River run of shad yielded commercial landings of 62,000 fish weighing 231,571 pounds, worth \$32,806 to the fishermen--a decline of 5 percent in volume, but an increase of 2 percent in value compared with 1969. Fishermen received an average price of 14 cents per pound--1 cent more than in 1969. In 1970, 65 fishermen participated in the Hudson River commercial shad fishery--a decline of 11 fishermen compared with the previous year.

Statistics on the 1970 operating units and landings of shad in the Hudson River by New York and New Jersey fishermen are included in the operating units and landings data for those States.

NOTE:--DATA REPRESENT LANDINGS IN THE HUDSON RIVER BETWEEN WEEHAWKEN, N.J., AND HUDSON, N.Y.

SECTION 4 - CHESAPEAKE FISHERIES

The commercial landings of fish and shellfish in the Chesapeake States (Maryland and Virginia) were a record 630.4 million pounds worth a record \$40.5 million--an increase of 276.4 million pounds (78 percent) and \$4.4 million (12 percent) compared with 1969. Record landings of menhaden were the principal reason for the greater harvest. In addition to menhaden, landings of the following major species increased significantly: hard blue crabs, surf clam meats, oyster meats, fluke flounders, gray sea trout, shad, and spot. Major species with smaller landings than in 1969 included sea scallop meats, hard and soft clam meats, alewives, striped bass, and swellfish.

Virginia landings of 550.6 million pounds worth \$22.0 million were 87 percent of the volume and 54 percent of the value in the Chesapeake area. Menhaden accounted for 81 percent of the Virginia landings, followed by hard blue crabs (8 percent), and alewives (3 percent). Hard blue crabs were 31 percent of the Maryland landings; oysters, 21 percent; and surf clams, 17 percent.

Fishermen and vessels. There were 18,998 fishermen operating 1,566 vessels of 5 net tons or more, 11,638 motor boats, and 667 other boats. Compared with 1969, this was an increase of 1,854 fishermen, 47 vessels, 1,702 motor boats, and 45 other boats.

Processed products. The value of processed seafood items in the Chesapeake States was \$100.4 million--an increase of \$21.5 million compared with 1969. Maryland's processed products were valued at \$58.2 million--58 percent of the area total. In Virginia, processed items were worth \$42.2 million. There were 7,811 persons employed in 465 wholesaling and processing plants in the two States.

Menhaden. Record landings of 449.8 million pounds were 268.1 million more than in 1969, and 35.3 million pounds more than in 1959, the former record year. Purse seines accounted for 90 percent of the landings. Only 4 percent of the purse seine production was taken in the Atlantic Ocean; the rest came from the Chesapeake Bay.

During the last decade menhaden landings have declined sharply along the Atlantic coast. Virginia has been the only State landing them in appreciable quantities--except for a brief fall fishery in North Carolina waters and a small fishery off the New Jersey coast. Menhaden are used principally by reduction plants for processing into meal and oil. In 1970, 93 percent of the harvest was used for reduction. The rest was used chiefly as bait for hard crabs.

Blue crabs. Hard blue crab landings were 67.4 million pounds worth \$4.5 million--a gain of 10.7 million pounds, but a decrease of \$899,000 compared with 1969. Landings through the winter dredge season, spring, and early summer were good, and the exvessel prices remained firm at about \$5 for a 100-pound barrel. Prices were restrained during the first half of the year by competition from crabs brought in from southern States and by fairly large inventories of unsold pasteurized crab meat.

During the latter part of the year crabs became less abundant because the fishermen began depending on the 1969 year class, which was not great. Virginia authorities lowered the legal size limit for hard crabs from 5 inches to 4-3/4 inches, measured from spike to spike. This change permitted the marketing of smaller crabs, but created difficulties when the crabs were shipped out of State, especially to Maryland where the size remained at 5 inches. Many Virginia truckers were fined in Maryland for possession of undersized crabs. Picked crab meat prices averaged less in the first 6 months of the year than during the comparable period of 1969. Backfin meat averaged about \$1 less per pound, and regular meat averaged from 50 to 75 cents less per pound. During the last half of the year, however, crab meat prices were about the same as in 1969.

Soft and peeler blue crab landings were 2.5 million pounds worth \$1.0 million--a decline of 41 percent in volume and 38 percent in value compared with 1969. The smaller harvest was probably caused by poor recruitment from the 1969 year class and excessive mortalities in the shedding floats during the summer.

Oysters. Landings of 24.7 million pounds of meats worth \$15.1 million were 2.5 million pounds and \$1.1 million more than in 1969. The Chesapeake States produced 46 percent of the total U.S. oyster landings. Maryland led the nation with an oyster production of 16.6 million pounds. In 1970, the yield of meats tended to increase in the area; Virginia oysters averaged almost 7 pints per Virginia bushel and Maryland oysters averaged 6-1/2 to 8 pints per Maryland bushel. In 1969, the yield averaged about 5-1/2 to 6-1/2 pints per Virginia or Maryland bushel. Exvessel prices were slightly less than in 1969. The production of seed oysters in Virginia was 36 percent greater than in 1969.

CHESAPEAKE FISHERIES

Alewives. Landings of 21.1 million pounds were 12.8 million (38 percent) less than in 1969, and the smallest production since 1961. The decline in landings followed a delayed spring migration caused by cool weather. When the fish finally appeared, they were in small schools and therefore not captured as readily as their usual full schools. The smaller or broken schools may have been caused by foreign vessels that were fishing herring offshore from the mouth of Chesapeake Bay.

Surf clams. Record landings of 14.6 million pounds of meats worth \$1.6 million increased 99 percent in volume and 73 percent in value compared with 1969. Most of the increase was during the first 7 months of the year when the fleet was fishing for inshore clams. The abundance of inshore clams encouraged the fishery, but packing firms finally refused to buy them because of a slow market. Beginning in August, the fleet fished the offshore clam beds. The surf clam fishery has been gradually moving south in its search for clam beds. In 1970, 19 dredge vessels landed at Ocean City, Md., and 8 other vessels landed at Chincoteague and Oyster, Va. Several plants shucked surf clams in both Maryland and Virginia. Other plants in Maryland packaged frozen surf clam specialties.

Spot. Landings of 6.4 million pounds were 5.4 million (502 percent) more than in 1969, and second only to the record harvest of 8.7 million pounds taken in 1949. The fishery began in the late spring, but most of the landings were made from July through September. September was the month of greatest production--the fish were taken as they began to move back out of the Chesapeake Bay. Catches were made principally by pound nets, haul seines, and gill nets.

Soft clams. Landings of 6.2 million pounds of meats worth \$2.4 million declined 21 percent in volume and 13 percent in value compared with 1969. The production decline resulted from overfishing in some areas and also from clam mortalities in the late summer--caused by low oxygen levels on the bottom. The average price per pound increased from 35 cents in 1969 to 39 cents in 1970. The entire production was from Maryland. Few stocks of soft clams exist in Virginia, which had no commercial clam fishery in 1970.

Hard clams. Landings of 1.9 million pounds of meats worth \$1.2 million declined 30 percent in volume and 29 percent in value compared with 1969. The harvest was the smallest since 1960. The decline was caused largely by lack of consumer demand. The littleneck and cherrystone sizes were still popular, but the chowder sizes were not. The chowder-sized clam usually was about 40 to 60 percent of the total landings, but in 1970, competition from the surf clam almost eliminated the chowder-size clam. Packing firms changed from buying hard clams to buying surf clams--with a noticeable effect on the fishery in the Chesapeake area.

Sea scallops. Landings of 750,000 pounds of meats worth \$995,000 declined 46 percent in quantity and 32 percent in value compared with 1969. The harvest was the smallest since 1964. Declining stocks of sea scallops and less fishing effort were the principal reasons for the smaller production. In 1970, 14 vessels were in the sea scallop fishery and made 120 trips. In 1969, 20 vessels made 201 trips. The average trip in 1970 landed 6,300 pounds of meats--compared with 6,800 pounds of meats per trip in 1969. In 1970, the average exvessel price was \$1.33 per pound--an increase of 26 cents per pound compared with 1969.

Other information. Landings of fish and shellfish in the bay and ocean areas of Maryland and Virginia are shown at the end of this section. Additional data may be found in the monthly and annual Maryland and Virginia landings bulletins published by the Statistics and Market News Division in cooperation with the respective States. Information on the daily, monthly, and annual production of fishery products in selected areas of these States is available in reports published by the NMFS Fishery Market News Office at Hampton, Va.

Acknowledgments. The following organizations helped collect the data appearing in this section: Maryland Fish and Wildlife Administration, Natural Resources Institute of the University of Maryland; Virginia Marine Resources Commission, Virginia Institute of Marine Science; and Potomac River Fisheries Commission.

CHESAPEAKE FISHERIES

POTOMAC RIVER SHAD AND ALEWIFE FISHERY

Shad landings in the Potomac River were 159,841 fish weighing 406,000 pounds worth \$39,909 to the fishermen--an increase of 34 percent in both number and poundage, and 71 percent in value compared with 1969. The harvest was the best since 1965. Maryland landings of 235,800 pounds were the largest since 1932.

Landings of alewives in the Potomac River were 13.6 million fish weighing 6.2 million pounds valued at \$141,542--a gain of 89 percent in number, 80 percent in poundage, and 105 percent in value compared with 1969.

In 1970, 275 fishermen participated in the Potomac River shad and alewife fisheries--120 less than in the previous year.

Statistics on operating units and landings of these fisheries are included in operating units and landings data for Maryland and Virginia.

NOTE:--EXCLUDES TRIBUTARIES OF THE POTOMAC RIVER.

SECTION 5 - SOUTH ATLANTIC FISHERIES 175

Commercial landings of fish and shellfish at ports of the South Atlantic States (North Carolina, South Carolina, Georgia, and the East Coast of Florida), including the commercial catch from fresh-water areas of Florida, where 280.2 million pounds worth \$29.8 million--a decline of 12 percent in volume and 18 percent in value compared with 1969. A sharp decrease in landings of menhaden and shrimp was a major factor in the decline.

North Carolina led all States with landings of 173.4 million pounds--21 percent less than in 1969 and the smallest production since 1951. Compared with 1969, South Carolina landings of 16.1 million pounds declined 22 percent and Georgia landings (14.4 million) declined 8 percent. Landings along the East Coast of Florida, however, increased from 63.4 million pounds in 1969 to 76.3 million in 1970, but the exvessel value of \$12.0 million remained about the same as in the previous year. The value in all other States declined sharply compared with 1969. The value of North Carolina landings (\$9.4 million) declined 25 percent; South Carolina (\$4.3 million) declined 19 percent; and Georgia (\$4.1 million) declined 36 percent.

Fishermen and vessels. Commercial fishermen numbered 8,881 in 1970--483 less than in 1969. A decrease in the number of full-time fishermen in the shore and boat fishery from 3,320 in 1969 to 2,781 in 1970 was the principal cause of the decline. The number of fishermen employed on vessels, however, increased from 3,339 in 1969 to 3,397 in 1970. The number of vessels (craft 5 net tons or more) also increased to 1,211 in 1970--a gain of 25 compared with 1969.

According to records of the U.S. Department of Transportation, 76 vessels with South Atlantic home ports received first documents as fishing craft in 1970. Of this number, 68 were newly constructed. Forty-six of the hulls were built of wood, 16 were of fiberglass, 5 of steel, and 1 of concrete. More than 20 percent of the new fishing vessels entered the shrimp fishery in the Gulf of Mexico for part of the year. Owners of several vessels made them available to sportfishermen as charter fishing craft.

Menhaden. Landings of 136.3 million pounds were 17 percent less than in 1969 and the smallest production since 1932. The decline was caused by an unusually poor season in the North Carolina fall and winter fishery. The weather was favorable for fishing, but the fish were not on the grounds in their usual numbers. Consequently the North Carolina landings of 108.2 million pounds were 37.0 million pounds less than in 1969. A small production in South Carolina also declined sharply. Farther south, landings along the East Coast of Florida were 28.0 million pounds--44 percent greater than in the previous year.

Food finfish. Landings of finfish used principally for human consumption were 67.0 million pounds--compared with 71.4 million in 1969. The exvessel value of \$8.9 million was slightly less than in 1969.

Landings of several species declined in 1970. The principal decline was in alewife landings of 11.6 million pounds--10.1 million (47 percent) less than in 1969 and the smallest production since 1964. In North Carolina, the major production area, landings of 11.5 million pounds declined 42 percent compared with 1969. South Carolina landings declined sharply, probably because of unusually low water in the Tail Race Canal of the Cooper River at the time of migration. Croaker landings of 886,000 pounds were 38 percent less than in 1969 and the smallest production since 1918. Compared with 1969, landings of mullet (4.3 million pounds) declined 5 percent and shad (1.9 million) declined 3 percent. As the fish were abundant in coastal waters, it appeared that lack of a good market for them accounted largely for the volume decline. Other species with reduced catches included bluefish and catfish and bullheads.

The production of several major species increased in 1970. King mackerel landings were a record 4.4 million pounds--a gain of 47 percent compared with 1969. Fishermen received an average price of 23 cents per pound for king mackerel--3 cents more than in 1969. Spanish mackerel fishermen also had a good year--landings of 3.6 million pounds were 48 percent greater than in 1969. The average price per pound increased from 11 cents in 1969 to 13 cents in 1970. Gray and spotted sea trout landings of 3.9 million pounds increased 51 percent compared with 1969. Landings of flounders, king whiting, red snapper, sea bass, shad and spot also increased moderately.

SOUTH ATLANTIC FISHERIES

Hard blue crabs. The 42.7-million-pound landings were 3 percent more than in 1969 and the best production since 1965. Fishermen in both North and South Carolina made unusually good catches during the first quarter of the year, but, as the season progressed, catches declined below the comparable periods of 1969. North Carolina landings of 20.9 million pounds and South Carolina landings of 7.0 million were both 1.3 million pounds less than in the previous year. Offsetting this decline, Georgia landings of 7.1 million pounds increased 38 percent and Florida, East Coast landings (7.8 million) increased 36 percent compared with 1969. In Georgia, officials closed St. Simons Sound to fishing because mercury contamination was discovered there. A considerable number of crab fishermen were affected adversely by the closure.

Shrimp. Landings of 20.6 million pounds (heads-on) worth \$11.4 million declined 6.7 million pounds (25 percent) and \$4.8 million (30 percent) compared with 1969. Exvessel prices were generally lower than in the previous year. The average price per pound was 55 cents--4 cents less than in 1969. Jumbo and large shrimp (under 15 to 30 tails per pound) were 46 percent of the total landings--compared with 31 percent in 1969. The decline in the average exvessel price paid for each size ranged from 7 to 14 cents per pound compared with 1969.

North Carolina landings of 5.1 million pounds were 2.8 million less than the exceptionally good production of the previous year. Landings of brown shrimp declined 35 percent and pink shrimp, 50 percent compared with 1969. White shrimp landings, however, were 36 percent greater than in 1969 and the best production since 1966. In September, white shrimp appeared in the waters of Pamlico Sound for the first time since 1953.

Compared with 1969, South Carolina landings of 5 million pounds declined 15 percent and Georgia landings of 6 million declined 29 percent. The fall white shrimp season was poor, and production was down 33 percent in South Carolina and 34 percent in Georgia. Brown shrimp landings, however, increased 52 percent in South Carolina and 13 percent in Georgia--probably because of a good spring and summer run in both States. Florida, East Coast landings (4.6 million pounds) were 11 percent less than in 1969. As in South Carolina and Georgia, a poor white shrimp season in the fall was a major factor in the decline. In North Carolina, the average price per pound declined sharply from 57 cents in 1969 to 49 cents in 1970. In both South Carolina and Georgia, fishermen received an average price of 59 cents per pound in 1969; but in 1970 the average price in South Carolina was 58 cents per pound and in Georgia, 56 cents. In Florida, East Coast, the average price per pound was 57 cents--7 cents less than in 1969.

Spiny lobsters. Landings of 3.1 million pounds were 760,000 pounds (20 percent) less than the record production of 1969. In that year, United States fishermen made catches in waters off the Bahama Islands that contributed substantially to the record landings. In 1970, however, the Bahamian Government had established a 12-mile territorial sea limit before the fishing season began. The restriction kept some U.S. fishermen from their accustomed fishing areas and accordingly curtailed production. In addition, the State of Georgia, acting to assist Florida in the management of its spiny lobster fishery, prohibited lobster landings in Georgia from April 1 to August 31. Florida legislation already prohibited landings, regardless of origin of the catches, during the closed season.

With landings prohibited in both Georgia and Florida ports during the closed season, a few vessels made small landings of spiny lobsters at South Carolina ports. In 1970, fishermen received an average price of 61 cents per pound--compared with 69 cents in 1969.

Calico scallops. Landings of 1.8 million pounds of meats worth \$729,000 increased 1.6 million pounds and \$556,000 compared with 1969. North Carolina accounted for 86 percent of the landings. It was the first time in 2 years that fishermen had been able to locate calico scallops in sufficient quantities in North Carolina waters to provide good fishing. Catches were consistently good throughout the year. Landings might have increased if enough workers (principally shuckers) had been available in the processing plants to handle the greater volume. The two new vessels that were completely mechanized for processing their catches of calico scallops at sea fished off both North Carolina and Florida.

Oysters. The production of 1.6 million pounds of meats was 11 percent less than in 1969--continuing the downward trend that began in 1966. Landings were the smallest recorded since 1880. The value was \$974,000--a decline of 10 percent compared with 1969. North Carolina was the only State with landings greater than in 1969, but the increase was only 13,000 pounds. In October, more oyster grounds became available when the Newport River was reopened to oyster fishermen. They found it difficult, however, to market the oysters taken there because most prospective buyers were aware that the oyster grounds had been closed the previous year because of pollution and were often unwilling to buy them. In South Carolina, always the leading producer in the South Atlantic States, landings of 852,000 pounds were the smallest since 1945 when 722,100 pounds were landed. In March and April, oysters were scarce and the South Carolina Wildlife Resources Department extended the spring season from April 30 to May 15. Landings did not improve, however, because few oysters were available on the grounds. Compared with 1969, landings in Georgia (179,000 pounds) declined 30 percent and in Florida, East Coast (212,000 pounds), 12 percent.

Other information. Seasonal variation in landings of fish and shellfish in North Carolina, South Carolina, Georgia, and Florida can be ascertained from the monthly and annual landings bulletins published in the Current Fishery Statistics Series by the Statistics and Market News Division in cooperation with the respective States. Additional data on many aspects of the South Atlantic fisheries may be found in the daily, monthly, and annual reports published by the NMFS Fishery Market News Service in New Orleans, La.

Acknowledgments. The following organizations helped collect the data appearing in this section: North Carolina Department of Conservation and Development, Division of Commercial Fisheries; South Carolina Wildlife Resources Department, Division of Commercial Fisheries; Georgia Game and Fish Commission, Coastal Fisheries Division; and Florida State Board of Conservation.

NOTE:--ALL WEIGHTS ARE ON HEADS-OFF BASIS. THE SIZE INDICATES THE NUMBER OF HEADS-OFF SHRIMP TO THE POUND. TO CONVERT TO HEADS-ON WEIGHT MULTIPLY BY 1.61 FOR BROWN, 1.60 FOR PINK, 1.54 FOR WHITE, 1.53 FOR SEA BOBS, AND 1.80 FOR ROYAL RED. THE STATES LISTED REPRESENT THE STATES WHERE THE SHRIMP WERE LANDED REGARDLESS OF WHERE CAUGHT. THE NAMES OF THE SPECIES USED IN THESE TABLES ARE AS FOLLOWS: WHITE SHRIMP (MOSTLY *PENAEUS SETIFERUS*), BROWN SHRIMP (MOSTLY *PENAEUS AZTECUS*), PINK SHRIMP (MOSTLY *PENAEUS DUORARUM*), SEA BOBS (MOSTLY *XIPHOPENAEUS KROYERI*), AND ROYAL RED (MOSTLY *HYMENOPENAEUS ROBUSTUS*). THE VALUE REPORTED IS THE AMOUNT RECEIVED BY THE OWNERS OR OPERATORS OF THE VESSELS FOR THE FIRST SALE AT THE DOCK. ANY EXPENSES INVOLVED IN HANDLING OR PROCESSING ASHORE ARE NOT INCLUDED, EVEN THOUGH CHARGEABLE TO THE VESSELS. THE SIZE REPORTED GENERALLY IS THAT USED AS OF THE FIRST SALE. SIZE GRADING IN VARYING DEGREES OF UNIFORMITY MAY OR MAY NOT OCCUR AT, OR PRIOR TO, THE TIME FIRST SALES ARE MADE. IF GRADING IS NOT DONE AT THIS TIME, THE SIZE REPORTED IS AN AVERAGE SIZE AND MAY INCLUDE SEVERAL SIZE CLASSIFICATIONS.

SECTION 6 - GULF FISHERIES

207

The commercial landings of fish and shellfish at ports of the Gulf States (West Coast of Florida, Alabama, Mississippi, Louisiana, and Texas) were 1.7 billion pounds worth \$166.6 million--a gain of 83.6 million pounds (5 percent) and \$14.3 million (9 percent) compared with 1969. Record landings of menhaden and excellent landings of shrimp were major factors contributing to the greater volume and value. Fishermen received high prices for shrimp during most of the year.

Louisiana led in volume of landings with a record 1.1 billion pounds (65 percent), followed by Mississippi with 297.8 million (17 percent); Texas, 147.0 million (9 percent); Florida, West Coast, 116.5 million (7 percent); and Alabama, 29.6 million pounds (2 percent). Compared with 1969, the value of landings increased in all States except Alabama. The value of Louisiana landings (\$61.1 million) was up 12 percent; Texas (\$53.3 million), up 13 percent; Florida, West Coast (\$31.2 million), up 6 percent; and Mississippi (\$11.1 million), up 5 percent. The value of landings in Alabama (\$9.9 million) declined 6 percent.

Fishermen and vessels. Commercial fishermen numbered 24,891--a decline of 227 compared with 1969. A decrease of 420 fishermen in the boat and shore fishery accounted for most of the decline. Vessels (craft of 5 net tons or more) numbered 4,320--the same as in 1969.

According to records of the U.S. Department of Transportation, 249 vessels with home ports in the Gulf of Mexico received first documents as fishing craft in 1970. Of this number, 235 were newly constructed. About 135 of them joined the Gulf shrimp fleet; and another 51, built for U.S. citizens in the fishery trade, operated out of countries in South America. The remaining vessels either entered the commercial fishery for oysters, red snapper, menhaden, and other species, or were used as charter craft.

Processed products. The value of processed seafood items was \$325.7 million--an increase of \$16.1 million compared with 1969. Louisiana led in production with products valued at \$102.4 million, followed by Texas with \$88.9 million; Florida, West Coast, \$80.8 million; Mississippi, \$33.0 million; and Alabama, \$20.6 million. The five States had 13,427 persons employed in 817 wholesaling and processing plants.

Weather. In August, the shrimp industry at Aransas Pass and Rockport, Tex., was badly damaged by hurricane Celia. The winds reached a velocity of about 145 m.p.h. and sank 36 large shrimp trawlers, beached 32, and severely damaged the hulls of 38. In addition, about 25 small shrimp trawlers were either destroyed or badly damaged. Many processing plants on shore were also damaged extensively. The total loss to fishing craft and shore installations was estimated at a minimum of \$3 million.

Menhaden. Landings were a record 1.2 billion pounds--5 percent more than in 1969, the former record year. The menhaden fishery had 76 purse seiners operating in 1970--the same as in 1969. Most of the fish were taken in the coastal waters of Louisiana. Record landings of 959.8 million pounds in Louisiana accounted for 79 percent of the production.

Compared with 1969, prices of menhaden meal and oil increased despite greater production in the Gulf States. The improved prices resulted mainly from a decline in total available supplies in the United States. In 1970, imports of fish meal (251,500 tons) were 30 percent less than in 1969, and the smallest quantity imported since 1961.

Shrimp. For the fourth consecutive year, landings exceeded 200 million pounds. Landings of 230.5 million pounds (heads-on) were 15 percent greater than in 1969, and second only to the record 237.2 million pounds taken in 1954. Compared with 1969, landings increased in all States. Louisiana led for the second consecutive year with 90.9 million pounds (up 10 percent), Texas was next with 88.3 million (up 25 percent); Florida, West Coast, 26.6 million (up 16 percent); Alabama, 15.0 million (up nearly 1 percent); and Mississippi, 9.6 million (up 8 percent).

GULF FISHERIES

The exvessel value of landings was a record \$108.2 million--an increase of 7 percent compared with 1969. The average price declined, however, from 50 cents per pound in 1969 to 47 cents in 1970, probably because shrimp supplies were abundant. Jumbo and large shrimp (under 15 to 30 tails per pound) averaged 6 to 12 cents less per pound than in 1969; medium shrimp (31 to 50 tails per pound) were 10 to 11 cents less; and most of the smaller shrimp were 4 to 8 cents less per pound.

Fishing on most of the major grounds improved compared with 1969. Record catches from the inshore and offshore waters between the Mississippi River and the Louisiana-Texas border contributed substantially to the greater production. The 59.5 million pounds (heads-off) taken from these waters increased 19 percent compared with 1969, and 14 percent compared with 1963, the former record year. Waters from three areas yielded catches that increased 26 percent each compared with 1969--off Texas (44.4 million pounds), off the Mexican coast west of long. 94° W. (5.2 million), and off the northwest coast of Florida (2.5 million pounds). The Sanibel-Tortugas grounds produced 11.4 million pounds--a 16-percent gain compared with 1969. Catches declined slightly on the Obregon-Campeche grounds and from Pensacola to the Mississippi River.

The species composition was about the same as in 1969. Brown shrimp were 56 percent of the total landings; white, 32 percent; pink, 11 percent; and sea bobs and royal red shrimp, 1 percent. Jumbo and large shrimp accounted for 38 percent of the landings, compared with 33 percent in 1969; medium shrimp were 27 percent, compared with 29 percent in 1969; and small shrimp were 35 percent, compared with 38 percent in 1969.

Hard blue crabs. Landings of 34.0 million pounds worth \$2.8 million increased 2 percent in volume, but declined 9 percent in value compared with 1969. Florida, West Coast landings of 14.8 million pounds were 3.2 million greater than in 1969 and accounted for most of the gain. Mississippi landings (2 million pounds) increased 16 percent compared with 1969. Louisiana landings of 10.3 million pounds was 12 percent less than in 1969, but the third best yield since 1955. Landings in Texas of 5.5 million pounds were only slightly less than the record 6.3 million taken in the previous year. Alabama landings of 1.4 million pounds were the smallest since 1963.

Oysters. Landings of 17.7 million pounds of meats were 2.1 million less than in 1969 and the smallest landings since 1966. Compared with 1969, landings declined in all States except Texas. Landings along the West Coast of Florida (3.6 million pounds) declined 27 percent, principally because oysters were scarce on the major reefs of Florida near Apalachicola. A poor fall season contributed to the decline. Alabama landings of 279,000 pounds were 42 percent less than in 1969 and the smallest landings in 40 years. Many oyster reefs had only partially recovered from the devastating effects of hurricane Camille in 1969, and in addition the Alabama oyster fishery had been hindered for some time by pollution. In Mississippi, landings of 548,000 pounds declined 62 percent--principally because the oyster beds had been decimated by hurricane Camille in 1969. Louisiana landings of 8.6 million pounds were 6 percent less than in 1969--reflecting the shortage of oysters on many reefs. In Texas, landings of 4.7 million pounds increased 24 percent. Texas producers profited by the shortage of oysters in other areas and trucked considerable quantities to Alabama, Mississippi, and Louisiana.

Spiny lobsters. Record landings of 7.1 million pounds worth a record \$4.2 million were 2.4 million pounds (52 percent) and \$882,000 (27 percent) more than in 1969. The average price per pound declined from 71 cents in 1969 to 60 cents in 1970.

In 1969, United States fishermen made substantial catches in waters off the Bahama Islands. In 1970, however, they could no longer fish for lobsters in these productive areas because the Bahamian Government had established a 12-mile territorial sea limit which was enforced rigorously. Consequently, U.S. flag vessels searched other fishing grounds for lobsters and found an abundance of them off the coasts of Central and South America. A few of the catches taken off

foreign coasts were landed in Mississippi instead of Florida where the closed season for lobsters was in effect. Lobster landings in Florida are prohibited by law during the closed season, regardless of the origin of the catch.

Food finfish. Compared with 1969, several major species including red snapper, mullet, spanish mackerel, groupers, and fresh-water catfish declined in volume. Red snapper landings were 8.5 million pounds--a decrease of 1.0 million and the smallest yield since 1954. Landings declined in all States except Louisiana. The value of \$3.8 million was \$161,000 less than in 1969. Red snapper landings were usually not sufficient to supply the market, and exvessel prices continued to trend upward. The average price per pound was 45 cents--compared with 42 cents in 1969 and 34 cents in 1968. The higher prices, however, did not increase the profit margin appreciably for vessel owners because smaller catches on Gulf of Mexico grounds caused snapper vessels to search out new grounds farther afield, off the coasts of Central and South America. These long trips increased operating costs. Mullet landings were 26.5 million pounds--10 percent less than in 1969. The average price of 8-1/2 cents per pound was about the same as in 1969. The spanish mackerel production of 8.2 million pounds was just slightly less than the record landings of the previous year. Landings of both groupers (7.5 million pounds) and fresh-water catfish (4.3 million) declined 2 percent compared with 1969.

Compared with 1969, landings of several important species increased. Landings of 4.9 million pounds of spotted sea trout worth \$1.4 million increased 6 percent in both volume and value. The pompano fishery, centered in Florida, reached a production of 906,000 pounds worth \$1.0 million--an increase of 36 percent in volume and 59 percent in value compared with 1969. The average price of 95 cents per pound in 1969 increased to \$1.11 in 1970. Croaker landings of 7.4 million pounds worth \$989,000 were 2.2 million pounds and \$315,000 greater than in 1969. The trawl fishery for croaker increased markedly as fishermen strove to supply the market for croaker created by the declining yield off the Atlantic coast.

Pollution. The discovery of mercury pollution in a few bays and rivers along the Gulf coast, mainly in areas seldom fished commercially, resulted in nation wide publicity that curtailed sales of fish and shellfish for a considerable time.

The additional discovery of mercury in swordfish in proportions that exceeded the U.S. Food and Drug Administration's definition of safe consumption levels discouraged a promising new fishery in the Gulf of Mexico. Findings of the NMFS exploratory fishing program had indicated that swordfish were available in the deep waters of the Gulf, especially during the winter--when they are absent on the regularly fished grounds off the Atlantic coast. Acting on this information, a few longliners from the Atlantic coast entered the fishery in the Gulf in 1968 and 1969, and made good catches. Fishermen received excellent prices as fresh swordfish was usually not on the market at that time of the year. Accordingly, several owners of Gulf shrimp trawlers converted their vessels for the longline swordfish fishery and were ready to operate at the time the high mercury content was discovered in swordfish. As a result of the discovery, vessel owners lost considerable fishing time and sustained financial loss in converting trawlers to longliners.

Other information. Seasonal variations in landings of fish and shellfish in Florida, Alabama, Mississippi, Louisiana, and Texas can be ascertained from the monthly and annual landings bulletins published in the Current Fishery Statistics Series by the Statistics and Market News Division in cooperation with the respective States. Additional data on many aspects of the Gulf fisheries may be found in the daily, monthly, and annual reports published by the NMFS Fishery Market News Service in New Orleans, La.

Acknowledgments. The following organizations helped collect the data appearing in this section: Florida State Board of Conservation, Alabama Department of Conservation, Mississippi Marine Conservation Commission, Louisiana Wild Life and Fisheries Commission, and Texas Parks and Wildlife Department.

NOTE: --ALL WEIGHTS ARE ON HEADS-OFF BASIS. THE SIZE INDICATES THE NUMBER OF HEADS-OFF SHRIMP TO THE POUND. TO CONVERT TO HEADS-ON WEIGHT MULTIPLY BY 1.61 FOR BROWN, 1.60 FOR PINK, 1.54 FOR WHITE, 1.53 FOR SEA BOBS, AND 1.80 FOR ROYAL RED. THE STATES LISTED REPRESENT THE STATES WHERE THE SHRIMP WERE LANDED REGARDLESS OF WHERE CAUGHT. THE NAMES OF THE SPECIES USED IN THESE TABLES ARE AS FOLLOWS: WHITE SHRIMP (MOSTLY PENAEUS SETIFERUS), BROWN SHRIMP (MOSTLY PENAEUS AZTECUS), PINK SHRIMP (MOSTLY PENAEUS DUORARUM), SEA BOBS (MOSTLY XIPHOPENAEUS KROYERI), AND ROYAL RED (MOSTLY HYMENOPENAEUS ROBUSTUS). THE VALUE REPORTED IS THE AMOUNT RECEIVED BY THE OWNERS OR OPERATORS OF THE VESSELS FOR THE FIRST SALE AT THE DOCK. ANY EXPENSES INVOLVED IN HANDLING OR PROCESSING ASHORE ARE NOT INCLUDED, EVEN THOUGH CHARGEABLE TO THE VESSEL. THE SIZE REPORTED GENERALLY IS THAT USED AS OF THE FIRST SALE. SIZE GRADING IN VARYING DEGREES OF UNIFORMITY MAY OR MAY NOT OCCUR AT, OR PRIOR TO, THE TIME FIRST SALES ARE MADE. IF GRADING IS NOT DONE AT THIS TIME, THE SIZE REPORTED IS AN AVERAGE SIZE AND MAY INCLUDE SEVERAL SIZE CLASSIFICATIONS.

SECTION 7 - PACIFIC COAST FISHERIES

The commercial fisheries of the Pacific Coast States (Alaska, Washington, Oregon, and California) yielded landings of 1.5 billion pounds worth \$235.0 million--a gain of 283.8 million pounds (24 percent) and \$57.6 million (32 percent) compared with 1969. Landings of anchovies, salmon, tuna, Dungeness crabs, and shrimp increased sharply, and landings of halibut and snow crabs had smaller gains. Landings of bonito, sea herring, jack and Pacific mackerel, king crabs, and sea scallops declined compared with 1969. Prices were generally higher than in 1969.

The Pacific Coast States had 30 percent of the volume and 38 percent of the value of U.S. landings, and exceeded all other areas in value. California with landings of 702.7 million pounds had 47 percent of the quantity of the Pacific Coast production, followed by Alaska with 545.3 million pounds (37 percent). Alaska with \$96.1 million had 41 percent of the value of the Pacific Coast landings, followed by California (\$86.4 million) with 37 percent. Washington and Oregon supplied the remaining 231.7 million pounds worth \$52.5 million.

Fishermen and vessels. The Pacific Coast States had 42,142 fishermen using 5,446 vessels (5 net tons or more) and 15,969 motor boats--a gain of 2,115 fishermen and 302 vessels, but a decline of 1,455 motor boats compared with 1969.

Processed products. The value of processed seafood items was \$579.7 million--an increase of \$134.1 million compared with 1969. California led with products valued at \$299.8 million, followed by Alaska with \$185.9 million; Oregon, \$47.8 million; and Washington, \$46.2 million. There were 15,606 persons employed in 510 wholesaling and processing plants in the four States.

Salmon. Landings of 410.1 million pounds worth a record \$98.7 million were 142.3 million pounds (53 percent) and \$35.8 million (57 percent) more than in 1969. The harvest was the largest since 1949. A sharp increase in red salmon landings in Alaska and near-record silver salmon landings in Washington and Oregon were the principal reasons for the greater production.

Alaska landings were 346.5 million pounds worth \$68.0 million--a gain of 127.3 million pounds and \$25.5 million compared with 1969. Alaska accounted for 84 percent of the total salmon landings and 69 percent of the total value. Biologists had predicted a run of 50 to 60 million Bristol Bay red (sockeye) salmon, and the actual run was about 47 million fish. The pink salmon run also fell somewhat short of expectations. Despite the smaller than anticipated runs, red salmon landings in Alaska were 150.8 million pounds--79.1 million more than in 1969, and the best production since 1938. Bristol Bay fishermen caught more red salmon than the processing plants could handle at the Bay. As a result, an airlift was devised to fly the extra salmon to processing plants in Anchorage and other Alaska cities. Fishermen took their salmon 20 miles upriver where the fish were iced and packed into plastic-lined containers, and then trucked to aircraft waiting nearby. Airplanes flew about 20,000 air miles carrying an estimated 1.5 million pounds of sockeye salmon. Landings of all other salmon species in Alaska increased significantly compared with 1969; pink salmon, 117.7 million pounds (up 11 percent); chum, 54.5 million (up 140 percent); silver, 11.9 million (up 48 percent); and chinook salmon, 11.5 million pounds (up 7 percent).

Compared with 1969, salmon landings in Washington (37.6 million pounds) increased 18 percent, and in Oregon (19.4 million), 84 percent. Sharply increased silver salmon landings in both States accounted largely for the gain. The silver salmon production in Washington was 17.4

PACIFIC COAST FISHERIES

45

million pounds--144 percent more than in 1969; in Oregon, it was 13.1 million pounds--an increase of 165 percent. Biologists attributed abundance of the fish to the excellent results achieved by intensive hatchery programs carried out in both States. A cooperative effort by industry, State, and Federal agencies has improved the water quality of Oregon's Willamette River--a stream once too polluted to sustain fish life. The installation of modern fishways at the industrial complex at Willamette Falls will further aid salmon migrations. In 1970, scientists observed the salmon migrations by means of a television camera and video tapes--a method developed by NMFS engineers. They reported that the spawning run of silver and fall chinook salmon had exceeded all recent migrations.

California landings of chinook and silver salmon were 6.6 million pounds worth \$5.1 million--a gain of 7 percent in volume and 33 percent in value compared with 1969.

The total pack of canned salmon was 3,822,200 standard cases worth a record \$138.7 million--an increase of 1,271,300 cases and \$48.4 million compared with 1969. It was the largest pack since 1966. Most of the gain was in Alaska where the pack of 1,705,500 cases of red salmon was nearly 1 million cases more than in 1969. The pack of pink salmon in Alaska (1,328,500 cases) also increased sharply compared with the previous year. Alaska accounted for 93 percent of the canned pack of salmon and 90 percent of its value.

Tuna. Landings of 378.4 million pounds worth \$71.5 million were 63.3 million pounds and \$19.2 million more than in 1969. The harvest was second only to the record 389.9 million pounds taken in 1950. A marked increase in landings of skipjack tuna (up 67 percent) and slighter increases in albacore (up 17 percent) and yellowfin tuna (up 15 percent) accounted largely for the gain. Bluefin tuna landings declined sharply compared with 1969.

Albacore landings of 56.1 million pounds were 8.0 million more than in 1969. The harvest was the third largest on record--exceeded only by the 72.5 million pounds taken in 1950 and the 60.8 million taken in 1963. Most of the albacore remained in northern California waters from July to early November. The resulting California production of 29.9 million pounds was twice that of the previous year. The albacore runs in the Pacific Northwest were rather erratic, and fishing was often hampered by strong northwesterly winds and rough seas. Few fish were taken in August (usually the best month), but exceptionally good fishing in September partly compensated for the disappointing August production. In Washington, albacore landings of 4.4 million pounds increased 829,000 pounds; but in Oregon, landings of 21.8 million declined 8.0 million pounds compared with 1969. The average price per pound increased from 22 cents in 1969 to nearly 27 cents in 1970.

Bluefin tuna landings of 8.7 million pounds worth \$1.6 million declined 43 percent in volume and 34 percent in value compared with 1969. It was the smallest production since 1952. The average price per pound was 18 cents--almost 3 cents more than in 1969. In early July, fishermen made fair catches of bluefin tuna off the coast of Baja California. The fishery developed quickly in all areas, and by early August fishermen had taken a substantial part of the total bluefin harvest. Beginning in late August, two U.S. vessels based in Puerto Rico fished for bluefin tuna off the east coast of the United States. They returned to Puerto Rico in late September with about 1,500 tons of mixed bluefin and skipjack tuna.

Skipjack tuna landings of 76.9 million pounds worth \$12.1 million were 30.9 million pounds and \$6.0 million more than in 1969. The average price per pound was 16 cents--compared with 13 cents in 1969. The skipjack fishery was generally slow until June and July when most of the landings were made. Early in October, however, excellent catches of skipjack were taken off the coast of Baja California. Several vessels made trips of 11 to 20 days with almost full loads of skipjack tuna.

PACIFIC COAST FISHERIES

Record landings of 236.7 million pounds of yellowfin tuna were 31.1 million more than in 1969, the former record year. The value (\$42.8 million) increased 29 percent compared with 1969. Fishermen received an average price of 18 cents per pound--compared with 16 cents in 1969.

In accordance with the recommendation of the Inter-American Tropical Tuna Commission, the 1970 quota of yellowfin tuna from the eastern tropical Pacific was held to 120,000 tons. The fishery opened January 1 and closed March 23, 1970. It was the fifth consecutive year that this fishery operated under a quota system designed to maintain the yellowfin population at the maximum sustainable yield.

After the quota was taken, a reported total of 25 U.S. flag vessels fished in eastern Atlantic waters off West Africa and another eight tuna seiners fished on an exploratory basis in the western Pacific Ocean.

Anchovies. Landings in California were a record 192.5 million pounds--an increase of 57.2 million (42 percent) compared with 1969, the former record year. The increased landings resulted from greater fishing effort, early season price agreement, and favorable market prices for anchovy meal.

It was the sixth consecutive year for the anchovy reduction fishery. As in previous years, the California Fish and Game Commission established separate catch quotas and a split fishing season for the two permit areas that are divided by Point Conception in Santa Barbara County. The 1970-71 season in the Northern Permit Area opened August 1, 1970, with a catch quota of 10,000 tons, and in the Southern Permit Area on September 15, 1970, with a catch quota of 100,000 tons. The early season was scheduled to close in both areas on January 3, 1971. When the early season ended, fishermen had taken nearly 50 percent of the total allowable catch quota of 110,000 tons.

Shrimp. Landings of a record 92.9 million pounds (heads-on) worth a record \$5.5 million were 30.3 million pounds (49 percent) and \$1.7 million (47 percent) more than in 1969, the former record year. Record landings in Alaska (74.3 million pounds), Oregon (13.6 million), and California (4.1 million pounds) contributed to the peak production. In Alaska, the shrimp fishery has trended sharply upward since 1959 when landings were 13.1 million pounds--at that time a record harvest. The spectacular growth of the fishery has centered in the Kodiak area which yielded about 85 percent of the State total in 1970. The industry has developed rapidly with the introduction of new shrimping vessels and the invention of new peeling machines for processing.

Dungeness crabs. Landings were a record 58.5 million pounds worth a record \$12.1 million--a gain of 10.5 million pounds and \$1.0 million compared with 1969. Contributing to the increase were record landings of 14.9 million pounds in Oregon, and substantial landings in Washington (18.5 million) and California (15.4 million pounds). However, the Alaska production of 9.7 million pounds declined slightly compared with 1969. For the first time since 1960, Dungeness crab landings were greater than king crab landings.

Early in the season, Dungeness crabs in Washington were small and had a poor yield; prices dropped sharply. The crabs in Oregon, however, were large, and prices were firm. The Oregon production was 53 percent greater than in 1969. The quantity of crab gear used increased markedly in both Washington and Oregon. In Washington, 39,500 pots were used--compared with 29,950 in 1969; and in Oregon, 48,050 pots were used--compared with 44,900 in 1969. The Dungeness crab fishery in Washington had 148 vessels--49 more than in 1969. The Oregon fleet had 161 vessels--14 more than in 1969.

In Alaska, air shipment of significant quantities of live Dungeness crabs was a new development in 1970. The ports of Kodiak and Homer, Alaska, supplied most of the shipments. As much as 3,000 pounds of live crabs were flown to Hawaii each week, and smaller quantities were flown to Oregon and Arizona. A major problem encountered, however, was the mortality of the crabs while enroute to the destination. In an effort to overcome this drawback to a promising new market, a continuing effort was underway to develop improved shipping containers and handling methods.

King crabs. Landings of 52.1 million pounds were worth \$13.2 million--a decline of 5.7 million pounds (10 percent) and \$2.5 million (16 percent) compared with 1969. The harvest was the smallest since 1961. In an effort to conserve the declining resource, the Alaska Board of Fish and Game continued regulations begun in 1968 providing for a 6-month closure of certain fishing grounds. In addition, they established quotas in most fishing areas and limited the number of crab pots per vessel.

Fishermen lost no time because of price disputes. They agreed with plant owners on a price of 25-1/4 cents per pound before the season began at Kodiak on August 15. Competition for the supply of king crabs resulted in an increase to 30 cents per pound by the end of October, and to 36 cents per pound by the end of the year.

Five new king crab vessels entered the fishery early in 1970, but by the end of the year several vessel owners, disappointed by the declining king crab harvest, were planning to convert their vessels for use in other fisheries, such as the shrimp or sablefish pot fisheries.

Mackerel fishery. In California, the only Pacific Coast State with a mackerel fishery, the combined landings of Pacific and jack mackerel were 48.4 million pounds--a decrease of 5.9 million compared with 1969. The jack mackerel fishery (47.7 million pounds) declined for the third successive year, although the fish were fairly plentiful on the fishing grounds. Fishermen lost no time in price disputes or contract negotiations, but many of them preferred to fish for anchovies instead of jack mackerel.

Landings of Pacific mackerel (622,000 pounds) were 74 percent less than in 1969, and far below the record 146.4 million pounds taken in 1935. In an effort to conserve the dwindling Pacific mackerel resource, the California State Legislature approved legislation prohibiting commercial fishing for Pacific mackerel for 2 years. The law became effective in August 1970.

Halibut. Landings by the combined United States and Canadian halibut fleets were 54.9 million pounds (dressed weight)--6 percent less than in 1969. For the third consecutive year, Canadian fishermen landed more halibut (53 percent of the production) than United States fishermen.

U.S. Pacific halibut landings of 34.3 million pounds (round weight) worth \$8.7 million increased 1.1 million pounds but declined \$222,000 compared with 1969. Alaska landings of 28.3 million pounds were 24 percent more than in 1969. As halibut receipts increased at Kodiak and other Alaska ports, they declined to an alltime low at Seattle, Washington. Washington landings of 5.9 million pounds were 43 percent less than in 1969. The pattern of landings changed principally because Alaska firms began paying fishermen prices that competed with the higher prices traditionally offered at Seattle. Most fishermen preferred to deliver halibut to ports near the fishing areas, and to make additional fishing trips in the time formerly lost in the long run to Seattle. Halibut prices continued firm in 1970 until the end of the season when mounting frozen halibut inventories caused a sharp decline in exvessel prices. Pacific Coast fishermen received an average price of 25.4 cents per pound in 1970--1-1/2 cents less than in 1969.

Snow crabs. Landings of a record 14.5 million pounds were worth \$1.4 million--an increase of 29 percent in quantity and 25 percent in value compared with 1969. The continuing decline in king crab landings has resulted in a growing interest in the snow crab resource. Snow crabs can be taken with the same gear and processed in the same facilities as king crabs. Also like king crabs, they are a quality seafood that can help satisfy the consumer desire for crab meat. In 1970, Alaska packers supplemented the shortage of king crab meat with a record pack (42,527 standard cases) of snow crab meat.

In 1970, the U.S. Food and Drug Administration ruled that "snow" has been the usual name used to designate crab meat produced from species of Chionoecetes, and that all canned products must be so labeled.

PACIFIC COAST FISHERIES

Bonito. The 9.2-million-pound production declined 8.0 million compared with 1969, and was the smallest harvest in 5 years. The bonito fishery fluctuates widely. It has ranged from a low of 128,000 pounds in 1956 to a peak 21.2 million pounds in 1967. Early in the year, vessel owners and southern California canneries agreed on the price of bonito. Fishermen got \$140 per ton for 3- to 4-pound fish, and \$165 per ton for fish over 4 pounds.

Sea scallops. Landings of 1.5 million pounds of meats worth \$1.5 million declined 24 percent in volume and 4 percent in value compared with 1969. Alaska accounted for 99 percent of the quantity and value of the landings. Washington had the remaining 1 percent. Alaska had seven active scallop vessels--compared with 15 in 1969. The fishing effort centered in the Gulf of Alaska, and about 98 percent of the landings were made in the Kodiak area. Alaska fishermen received an average price per pound of \$1.03--compared with 82 cents in 1969.

Clams. Landings of 872,000 pounds of clam meats were 209,000 pounds more than in 1969, and the best harvest since 1962. The gain resulted principally from Washington landings of 285,000 pounds of razor clams (up 169 percent) and 470,000 pounds of hard clams (up 6 percent). A fishery for geoduck clams developed in Washington. A survey made by divers for the State Department of Fisheries indicated that a substantial supply of several million pounds of geoducks was available in waters of Puget Sound where diving gear could be used. These large "king" clams with enormous necks can be reached by divers using underwater air or water jets. Three diving crews produced about 21,000 pounds of shucked geoducks worth \$13,000. Most of the clams were steaked for restaurant use.

Pacific sardines. Landings of 442,000 pounds increased 337,000 pounds compared with 1969--but were far below the record 1.5 billion pounds taken in 1936. In an effort to conserve the Pacific sardine resource, the California Legislature enacted a law in 1967 providing for a 2-year moratorium on sardine fishing in California waters. In 1969, the moratorium was continued indefinitely, with the exception that sardines may be taken for bait under permits issued by the California Department of Fish and Game. The annual quota for bait is limited to 250 short tons, and when this quota has been reached, the permit holder is notified. Thereafter sardines cannot be taken except incidentally with catches of other fish, and may not exceed 15 percent by weight of a load. Sardines taken as incidental catch may be used only for canning or reduction, but not for bait.

Other information. Additional data may be found in the California monthly landings bulletins published in the Current Fishery Statistics Series by the Statistics and Market News Division in cooperation with the State. Information on many aspects of the Pacific Coast Fisheries appear in daily, monthly, and annual reports published by the NMFS Fishery Market News Office in Terminal Island, California, and Seattle, Washington.

Acknowledgments. The following organizations helped collect the data appearing in this section: Alaska Department of Fish and Game, Washington Department of Fisheries, Oregon Fish Commission, and California Department of Fish and Game.

1/ THE ROUND WEIGHTS USED IN LANDING TABLES WERE OBTAINED BY MULTIPLYING NUMBER OF FISH BY THEIR AVERAGE WEIGHT.

2/ LESS THAN 50 POUNDS.

NOTE:--THE ABOVE DATA INCLUDE LANDINGS OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES BY VESSELS OF U.S. REGISTRY AT BRITISH COLUMBIA PORTS. ROUND WEIGHTS OF FISH TAKEN BY HALIBUT VESSELS WERE OBTAINED BY MULTIPLYING REPORTED WEIGHTS, REPRESENTING POUNDAGE OF FISH EVISCARATED AND WITH HEADS-OFF, BY THE FOLLOWING FACTORS: HALIBUT, 1.33; SABLEFISH AND ROCKFISHES, 1.43.

PACIFIC COAST FISHERIES

LANDINGS BY THE HALIBUT FLEET AT SEATTLE, WASHINGTON

Halibut landings at Seattle were 3.7 million pounds (dressed weight) worth \$1.4 million-- a decline of 46 percent in volume and 49 percent in value compared with 1969. Fishing grounds west of Cape Spencer yielded 3.1 million pounds--a decline of 47 percent; fishing grounds south of Cape Spencer yielded 542,000 pounds--42 percent less than in 1969.

Sablefish landings from fishing grounds off Cape Spencer (13,000 pounds) were 28,000 pounds less than in 1969.

The following tables contain a summary of the landings of dressed halibut and sablefish at Seattle by the U.S. halibut fleet. These data are not directly comparable with the State and sectional tabulations, as the weights in those tables represent the round weight of fish landed.

NOTE:--THE 1970 HALIBUT FISHERY SEASON OPENED MARCH 17 IN AREAS 3C, 4C AND 4D. AREA 4C CLOSED APRIL 11, AND AREAS 3C AND 4D CLOSED NOVEMBER 15. AREAS 4A AND 4B WERE OPEN FROM MARCH 22 TO APRIL 4; AREA 4B REOPENED SEPTEMBER 1 AND CLOSED SEPTEMBER 14. AREA 3B WAS OPEN FROM APRIL 1 TO 6, REOPENED APRIL 25, AND CLOSED SEPTEMBER 30. AREAS 2 AND 3A OPENED APRIL 25 AND CLOSED SEPTEMBER 21.

WHALING, 1970

In 1970, the U.S. Department of the Interior placed eight species of whales on the endangered species list--reflecting a mounting national concern over the prediction of biologists that certain species are approaching extinction. The endangered whales were the bowhead, blue, humpback, right, gray, fin or finback, sei, and sperm. The last three were the only species sought recently by U.S. commercial whalers.

The NMFS Fishery-Oceanography Center in La Jolla, Calif., continued as a center for cetacean research. The whale research was directed toward understanding the life history, population dynamics, and ecology of the gray, sperm, and other whales inhabiting the eastern North Pacific Ocean. The whale program will continue to focus on the gray and sperm whales. The gray whale, once hunted almost to extinction, is now protected by international agreement. During its annual migration to its calving grounds at Scammon's Lagoon and other lagoons in Baja California, the gray whale passes the coast near Yankee Point, Calif., where NMFS makes a population count each year. Biologists estimate that the gray whale population is now about 11,000.

During the whaling season the Del Monte Fishing Company operated a whaling station at Point San Pablo, Calif. It was the only whaling station operating in the United States in 1970. As in previous years, the Del Monte Company used the catcher boats Allen Cody, Dennis Gayle, and Donna Mae. A special scientific permit authorized the capture of 30 of the 64 sperm whales taken. These 30 whales were taken under the supervision of a biologist.

All whale carcasses (excluding the meat) were taken to the Pacific Rendering Company, San Francisco, Calif., for processing into meal and oil. The entire catch was processed into 662,000 pounds of meal, 680,000 pounds of oil, and 483,000 pounds of meat (for use as canned or frozen animal food). These products were valued at \$138,000 to the producer--a decline of \$190,000 compared with 1969.

PACIFIC COAST FISHERIES

FUR SEAL INDUSTRY OF THE PRIBILOF ISLANDS, 1970

Fur sealing operations on the Pribilof Islands produced 42,179 commercial sealskins--an increase of 3,374 compared with 1969. Male seals accounted for 42,060 commercial sealskins; the remaining 119 were taken from female seals. Only 21 female seals were taken for scientific research; the rest were taken inadvertently.

CLASSES OF MALE SEALS TAKEN ON THE PRIBILOF ISLANDS, BY AGE GROUP, 1970

ITEM	ST. PAUL ISLAND	ST. GEORGE ISLAND
	-----PERCENT-----	
BY AGE:		
2-YEAR-OLDS	5	2
3-YEAR-OLDS	61	49
4-YEAR-OLDS	32	38
5-YEAR-OLDS	2	9
6-YEAR-OLDS	-	2
TOTAL	100	100

NOTE:--THE SEALING SEASON BEGAN JUNE 24 AND ENDED JULY 31, 1970.

Fur seal production on St. Paul Island was 86 percent of the total harvest--slightly more than in 1969.

For the eighth consecutive year, sealskin curing operations were under Government supervision. Of the 65-man crew only 28 were Pribilof and Aleutian residents. The rest were from the mainland areas. During the peak of the season, 46 men were employed in the plant at St. Paul and 19 at St. George Island.

A 5-year contract was awarded to the Oregon Marine Products Company to process fur seal carcasses from St. Paul Island and produce ground meat for use as frozen animal food. The Mitsubishi International, a Japanese company, has a similar contract to use the fur seal carcasses from St. George Island, but did not process carcasses in either 1969 or 1970.

A team of scientists from Virginia Mason Research Center of Seattle, Wash., spent considerable time on St. Paul Island, as they had in 1969. The team continued investigations of the various possible methods of destroying fur seals humanely.

DISTRIBUTION AND TAKE OF SEALSKINS, 1970

The fur seal treaty provides that Canada and Japan each receive 15 percent of the skins taken in the Pribilof Islands. The distribution of sealskins follows.

ITEM	UNITED STATES	CANADA	JAPAN	TOTAL
	-----NUMBER-----			
ST. PAUL ISLAND	25,380	5,439	5,439	36,258
ST. GEORGE ISLAND	4,145	686	686	5,921
TOTAL	29,525	6,327	6,327	42,179

The standard packing formula used in 1970 was 80 skins per barrel, with the exception of 100 barrels that were packed with 75 skins. Female sealskins were not barreled separately, but were marked and packed with the male skins. The season's production of blubber was 276 barrels.

SALE OF SEALSKINS, 1970

There were 39,722 fur sealskins sold for the account of the U.S. Government at two public auctions held in Greenville, S.C. Gross receipts from both 1970 sales were \$2,929,400. Offerings consisted of 34,203 conventionally processed skins, 2,891 LAKODA sheared skins, and 2,628 natural sheared. Proceeds of the sale that took place April 9-10 totaled \$1,639,300 and from the sale of Nov. 2-3, \$1,290,100.

SECTION 8 - GREAT LAKES FISHERIES

United States and Canadian fishermen in the five Great Lakes, Lake St. Clair, and three of the five international lakes of northern Minnesota and Canada landed 113.7 million pounds of fresh-water fish--a decline of 13.7 million compared with 1969. U.S. landings, however, increased from 68.5 million pounds worth \$6.1 million in 1969 to 71.6 million pounds worth \$6.4 million in 1970. U.S. landings were 63 percent of the total production. Canadian fishermen landed 42.1 million pounds--16.7 million less than in 1969. Two species (smelt and yellow perch) dominated the landings and accounted for 73 percent of the Canadian harvest.

The increased U.S. production was caused principally by greater landings of alewives--33.5 million pounds in 1970 compared with 29.2 million in 1969. Taken chiefly in Lake Michigan, alewives accounted for 47 percent of the U.S. landings. Compared with 1969, landings of carp (6.6 million pounds); chubs (11.0 million); coho salmon (2.2 million); suckers (1.4 million); and whitefish (2.4 million) increased moderately, but lake herring (1.4 million); sheepshead (1.1 million); smelt (3.6 million); white bass (1.1 million); and yellow perch (4.3 million pounds) declined.

Wisconsin led in volume of landings with 37.7 million pounds, followed by Michigan with 21.2 million; Ohio, 8.4 million; and Minnesota, 2.5 million pounds. Four States (New York, Pennsylvania, Illinois, and Indiana) supplied the remaining 1.8 million pounds. The five Great Lakes in order of total production were Michigan, 53.1 million pounds; Erie, 9.5 million; Superior, 5.0 million; Huron, 2.4 million pounds; and Ontario, 333,000 pounds. Lake of the Woods landings (1.1 million pounds) accounted for 96 percent of the U.S. production in the boundary lakes.

Fishermen and vessels. In 1970, 1,470 fishermen operated 231 vessels (5 net tons or more) and 614 smaller craft in the U.S. commercial fisheries--a decline of 207 fishermen, 38 vessels, and 133 smaller craft compared with 1969.

Processed products. The value of processed seafood items was \$36.5 million--an increase of \$3.2 million compared with 1969. Ohio led with products valued at \$19.5 million, followed by Illinois and Indiana together with \$5.4 million; Michigan, \$5.1 million; and Wisconsin, \$4.1 million. New York, Minnesota, and Pennsylvania supplied the remaining \$2.4 million. There were 2,122 persons employed in 199 wholesaling and processing plants in the eight States.

U.S. landings by lake.

Lake Ontario. Landings of 333,000 pounds worth \$78,800 were 39,500 pounds and \$35,100 more than in 1969. The harvest was the third largest since 1952. Compared with 1969, the value of bullheads (\$28,600) increased 89 percent, white perch (\$27,600) increased 290 percent, and yellow perch (\$3,700) increased 127 percent. The total gain in value resulted from the higher prices fishermen received for these three species.

Lake Erie. Landings were 9.5 million pounds worth \$1.3 million--a decrease of 14 percent in volume and 11 percent in value compared with 1969. Landings were 5.7 million pounds less than the 10-year average (1960-69) and the smallest harvest on record. Compared with 1969, the production of catfish, sheepshead, white bass, yellow perch, and yellow pike declined sharply. Carp was the only major species to increase in volume; carp landings of 3.4 million pounds were 381,300 pounds more than in 1969.

The fisheries of Lake Erie were curtailed sharply when the States of Ohio and Michigan closed the lake to commercial fishing in April 1970 because of possible contamination from high levels of mercury. Ohio soon reopened its fisheries, but Michigan's remained closed during the rest of the year. After the closure, a small production was taken from State of Michigan waters because netting operations were being tested.

Future prospects for the fisheries appear to be fairly encouraging. Biologists have reported that the hatch of white bass in 1970 was the best since 1957, and that the hatch and survival of yellow pike was also good. The yellow perch hatch was not as good as biologists had anticipated but was better than any year class since 1965.

Lake Huron. Landings of 2.4 million pounds were 17 percent less than in 1969, and the smallest production on record. The harvest of most major species--carp, chubs, white bass, whitefish, yellow perch, and yellow pike--declined sharply. However, catfish landings of 225,600 pounds increased 85 percent compared with 1969.

Lake Michigan. Landings of 53.1 million pounds worth \$3.8 million increased 5.6 million pounds and \$790,700 compared with 1969. The harvest was second only to the record 59-million-pound landings of 1967.

Lake Michigan accounted for 74 percent of the total Great Lakes landings and 59 percent of the value. Alewife landings of 33.5 million pounds were 4.2 million more than in 1969, and were 63 percent of the Lake Michigan production. Compared with 1969, landings of chubs (9.6 million pounds) increased 5 percent, coho salmon (2.2 million) increased 96 percent, and whitefish (1.7 million pounds) increased 25 percent. Whitefish landings were the best since 1952. The combined landings of chubs and whitefish were only 21 percent of the total harvest for the lake, but their combined value (\$3.5 million) was 71 percent of the total value. Lake trout, the high-priced species virtually eliminated by the sea lamprey, yielded landings of more than 87,000 pounds--the best harvest since 1949. The apparent rehabilitation of this fishery has resulted from effective lamprey control, restricted fishing, and restocking of the fishery resource.

Lake Superior. Landings of 5 million pounds were 230,600 pounds less than in 1969, and the smallest harvest since the turn of the century. Since 1961, production has trended steadily downward--principally because of a marked decrease in landings of lake herring, for many years the mainstay of the Lake Superior fishery. Lake herring landings were 1.4 million pounds--40 percent less than in 1969, and far below the record 17.8 million pounds taken in 1941. Lake trout, another important species, continued a sharp decline that began in 1959. Lake trout landings of 188,000 were 11 percent less than in 1969. In 1970, for the first time, smelt became the leading species in Lake Superior with a production of 1.6 million pounds--almost 50 percent greater than in the previous year.

Research. The four NMFS vessels, Cisco, Kaho, Musky II, and Siscowet continued to support research studies on the Great Lakes. Research continued on the alewife population explosion, pesticide concentrations in fish, and botulism organisms.

Sea lamprey control. The final count of sea lampreys captured at the 16 Lake Superior barriers was 5,692--compared with 9,234 in 1969. These barriers are used to assess the effectiveness of lampricides in the control of larval sea lampreys. Stream treatments are continuing on Lakes Huron and Michigan.

Other information. Seasonal variations in fish landings in Michigan, Ohio, and Wisconsin can be ascertained from monthly landings bulletins issued currently in cooperation with the fishery departments of these States. Additional specific data on Great Lakes fisheries may be found in the daily, monthly, and annual reports published by NMFS's Fishery Market News Service Office in Chicago, Ill.

Acknowledgments. The following organizations helped collect the data appearing in this section: Dominion Bureau of Statistics of Canada; Illinois Department of Conservation, Division of Fisheries; Indiana Department of Conservation, Division of Fish and Game, Section of Fish Management; Michigan Department of Natural Resources, Fisheries Division, Great Lakes Fisheries; Minnesota Department of Conservation, Division of Game and Fish, Section of Fisheries; New York State Department of Environmental Conservation, Great Lakes Fisheries Station; Ohio Department of Natural Resources, Division of Wildlife, Section of Fish Management; Pennsylvania Fish Commission; and the State of Wisconsin, Department of Natural Resources, Fish Management Division.

SECTION 9 - MISSISSIPPI RIVER FISHERIES 337

Commercial landings of fish and shellfish from the waters of the Mississippi River and its tributaries were 74.9 million pounds worth \$9.9 million to the fishermen--an increase of 5.5 million pounds and \$1.3 million compared with 1969. The increase resulted principally from improved landings of buffalofish, 21.3 million pounds (up 28 percent); carp, 18.5 million (up 10 percent); catfish and bullheads, 14.4 million (up 23 percent); and sheepshead, 5.6 million pounds (up 28 percent). However, landings of crawfish (1.8 million pounds) and mussel shells (5.8 million pounds) declined compared with 1969.

Five items--buffalofish, carp, catfish and bullheads, sheepshead, and mussel shells--accounted for 88 percent of the volume and 85 percent of the value. The landings were made by 13,919 fishermen, using 13,100 motor boats and 179 other boats--a gain of 2,438 fishermen, 2,777 motor boats, and 11 other boats compared with the previous year.

Wisconsin and Arkansas led in volume with 11.0 million pounds each, followed by Minnesota (8.8 million) and Louisiana (8.1 million pounds). Arkansas led in value of landings with \$2.3 million, followed by Louisiana with \$1.4 million.

The value of processed products was \$27.1 million--\$2.3 million more than in 1969. Frozen packaged fishery products accounted for \$20.1 million (74 percent) of the total, and increased 9 percent compared with 1969; fresh packaged fishery products accounted for \$1.8 million (7 percent) of the total, and increased 167 percent compared with 1969. Canned and industrial fishery products (\$3.1 million) and cured fishery products (\$2.1 million) were 11 percent and 8 percent, respectively, of the total value of processed fishery products.

Beginning with the 1964 report, the Mississippi River section has included some data from river systems not connected with or draining into the Mississippi River or its tributaries. For example, salmon are reported from waters draining into the Pacific Ocean. Landings are also reported from river systems draining north into Hudson Bay and south into the Gulf of Mexico.

The following organizations helped collect the data appearing in this section: Alabama Department of Conservation, Division of Game and Fish; Arizona Game and Fish Department; Arkansas Game and Fish Commission, Division of Fisheries; Colorado Game, Fish and Parks Department; Idaho Fish and Game Department; Illinois Department of Conservation, Division of Fisheries; Indiana Department of Conservation, Division of Fish and Game, Section of Fish Management; Iowa State Conservation Commission, Division of Fish and Game; Kansas Forestry, Fish and Game Commission, Fisheries Division; Kentucky Department of Fish and Wildlife Resources; Louisiana Wild Life and Fisheries Commission; Minnesota Department of Conservation, Division of Game and Fish, Section of Fisheries; Mississippi Game and Fish Commission; Missouri Conservation Commission; Montana Department of Fish and Game, Fisheries Management; Nebraska Game, Forestation and Parks Commission, Fishery Division; New Mexico Department of Game and Fish; North Dakota Game and Fish Department, Fisheries Division; Oklahoma Department of Wildlife Conservation; Division of Fisheries; South Dakota Department of Game, Fish and Parks; Tennessee Game and Fish Commission, Fish Management Division; Texas Game and Fish Commission; Inland Fisheries; Utah State Fish and Game Department; Wisconsin Conservation Department, Fish Management Division; Wyoming Game and Fish Commission; and the Tennessee Valley Authority, Fish and Game Branch.

NOTE:--INCLUDES LANDINGS IN THE INTERNATIONAL LAKES OF NORTHERN MINNESOTA.

SECTION 10 - HAWAII FISHERIES

Landings of commercially caught fish and shellfish in the State of Hawaii were 11.1 million pounds worth \$3.9 million to the fishermen--an increase of 1.5 million pounds and \$417,000 compared with 1969. Tuna landings increased from 7.1 million pounds in 1969 to 8.5 million in 1970, and accounted largely for the gain. The principal increase was in skipjack tuna landings of 7.3 million pounds--1.4 million (23 percent) greater than in 1969. Compared with 1969, landings of yellowfin tuna (683,000 pounds) increased 66 percent but albacore, bluefin, and little tuna declined.

Landings of the white crab (*Portunus sanguinolentus*) called "kuahonu" by native Hawaiians were 40,800 pounds--112 percent more than in 1969. The marked increase followed a change from using nets in shallow inshore waters to using traps in deeper waters.

Hawaii State biologists continued investigations intended to develop a mariculture industry for prawns. Assisted by a Federal Aid to States cooperative program administered by NMFS, they began production-type experiments designed to culture the giant Malaysian prawn in ponds. Previous research had led to successful rearing of large numbers of prawns from fertilization through the various juvenile stages.

Fishery products were landed at six of the eight principal islands that form the State of Hawaii. Oahu led the islands with a production of 9.1 million pounds. The Island of Hawaii was next with 830,500 pounds, followed by Maui with 806,400 pounds. The rest of the landings were made at Kauai, Lanai, and Molokai. In 1970, 1,436 fishermen operated 82 vessels of 5 net tons or more, 637 motor boats, and 49 other boats.

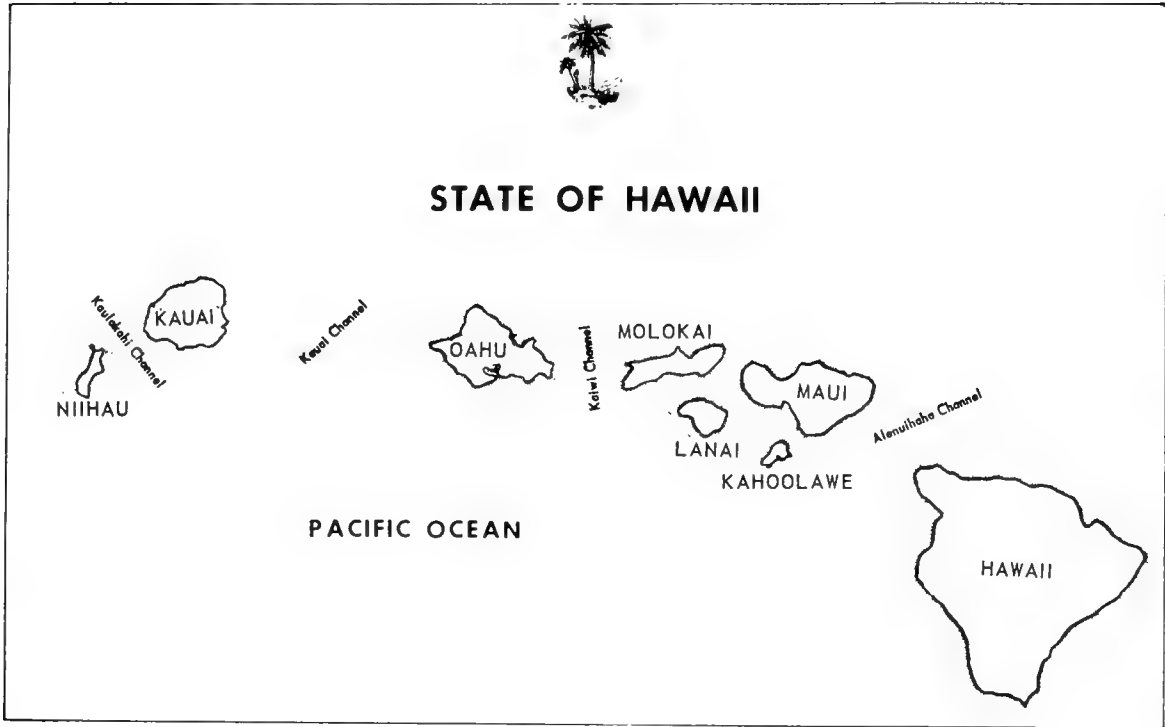

The data in this section were assembled and prepared for publication by the NMFS's area office, Honolulu, Hawaii, largely from information collected by the Hawaii Department of Land and Natural Resources, Division of Fish and Game.

The following tables contain summarized and detailed information on the 1970 operating units and landings by islands of the State of Hawaii.

SECTION II - PUERTO RICO FISHERIES

Landings in Puerto Rico are not included in the U.S. landings table in the General Review or Review of Certain Major Fisheries sections.

Puerto Rico landings of 83.6 million pounds worth \$15.4 million to the fishermen declined 16.2 million pounds and \$520,000 compared with 1969. Landings were the smallest since 1966.

A sharp decrease in landings of skipjack and yellowfin tuna was the principal cause of the decline. Compared with 1969, landings of skipjack tuna (23.9 million pounds) declined 15 percent and yellowfin tuna (53.8 million) declined 21 percent. However, there was a small production of bluefin tuna (1.0 million pounds) for the first time since 1967. Total tuna landings of 78.8 million pounds worth \$13.7 million were 94 percent of the volume and 89 percent of the value of the Puerto Rico landings.

Landings made by local fishermen, consisting largely of marine fish and shellfish, were 4.8 million pounds--an increase of 38 percent compared with 1969. Fishermen used various gear--principally gill nets, haul seines, hooks (troll, hand, and long or set lines), cast nets, fish pots, and weirs.

SECTION 12

REVIEW OF CERTAIN MAJOR FISHERIES

In this Section, there are complete data on the commercial landings of certain major species of fish and shellfish taken in the U.S. fisheries. Additional information is presented on the operating units for many of these fisheries. Most of the major species are taken by several types of fishing gear operated in two or more States; because of this, the casual reader of the digest may have difficulty in locating complete data. The information contained in this Section includes operating units and the volume and value of the catch by types of gear, by States, or by districts.

REVIEW OF CERTAIN MAJOR FISHERIES

U.S. COD FISHERY

U.S. fishermen landed 56.2 million pounds of cod worth \$5.9 million--a decline of 9 percent in volume but an increase of 17 percent in value compared with 1969.

Otter trawls took 84 percent of the landings; lines, 11 percent; and gill nets, almost 5 percent. Less than 1 percent was taken in purse seines, pound nets, floating traps, and dredges.

Landings at Massachusetts ports (43.8 million pounds) were 78 percent of the total. Maine was next with 5.4 million pounds, followed by Rhode Island, 3.0 million; and Washington, 2.7 million pounds. Eight other Atlantic and Pacific Coast States accounted for the remaining 1.1 million pounds.

REVIEW OF CERTAIN MAJOR FISHERIES

ATLANTIC COAST HADDOCK FISHERY

Haddock landings were 26.9 million pounds worth \$6.0 million--a decline of 18.9 million pounds and \$1.7 million compared with 1969. The harvest was the smallest on record, and far below the record 293.8 million pounds taken in 1929. Landings have declined steadily since 1967.

The haddock production of 25.3 million pounds at Massachusetts ports (comprising 94 percent of the total volume) was 19.1 million pounds (43 percent) less than in 1969. Otter trawls accounted for 94 percent of the landings. The rest was taken by lines, gill nets, and dredges.

1/ LESS THAN \$500.

PACIFIC COAST HALIBUT FISHERY, 1970

Halibut landings by the combined United States and Canadian fleets were 54.9 million pounds (dressed weight)--a decline of 3.6 million compared with 1969. U.S. fishermen landed 25.8 million pounds (47 percent of the total) and received \$9.2 million--817,000 pounds and \$254,000 more than in 1969. In 1970, the U.S. fleet operating out of Pacific coast ports numbered 209 vessels; in 1969, the fleet had 183 vessels. Canadian fishermen landed 29.1 million pounds--4.4 million less than in 1969.

The halibut quotas set by the International Pacific Halibut Commission declined in three major areas. Compared with 1969, the quota for Areas 2 and 3A was 1 million pounds less, and for Area 3B, it was 500,000 pounds less. The smaller quotas set in 1970 were: Area 2, 20 million pounds; Area 3A, 30 million; and Area 3B, 3 million pounds. In Areas 2 and 3A the season opened on April 25, 12 days earlier than in 1969. The quota was reached in both areas by September 21, 3 weeks before the mandatory closing date of October 15. Area 3B opened April 1 and closed April 6, but reopened April 25 and closed September 30. Areas 3C, 4C, and 4D opened March 17. Area 4C closed April 11, but Areas 3C and 4D remained open until November 15. Areas 4A and 4B opened March 22 and closed April 4. Area 4B, however, reopened from September 1 through September 14.

Data on the landings of halibut in the following tables represent the dressed weight of the fish, i.e., the weight by which the quota is determined. The dressed weight of halibut can be converted to round weight by multiplying by 1.33. Halibut landed in Canada by vessels of United States registry are credited to Alaska.

1/ IN ADDITION THERE WERE APPROXIMATELY 40,000 POUNDS OF "NORTHERN" HALIBUT LANDED IN CALIFORNIA. MOST OF THIS CATCH WAS INCLUDED UNDER "CALIFORNIA HALIBUT" AND "UNCLASSIFIED FLOUNDERS".
 NOTE:--HALIBUT STATISTICS IN THESE TABLES WERE COMPILED FROM DATA COLLECTED BY THE INTERNATIONAL PACIFIC HALIBUT COMMISSION. STATISTICS FOR OTHER SPECIES WERE FURNISHED BY THE STATES.

HALIBUT SCHOONER

ATLANTIC OCEAN PERCH FISHERY, 1970

Landings of Atlantic ocean perch declined for the tenth consecutive year. The harvest of 55.3 million pounds was 528,000 pounds less than in 1969, and 203.0 million pounds less than the record production of 1951. However, the value of \$2.7 million increased \$358,000 compared with 1969.

Maine landings of 46.7 million pounds worth \$2.3 million were 84 percent of the volume and 83 percent of the value. Massachusetts accounted for the rest, except for small landings in New Hampshire and Rhode Island. Maine and Massachusetts otter trawlers accounted for most of the production, with only small amounts taken by handlines and longlines.

Most of the catches were made in waters off New England and in the Gulf of St. Lawrence. Some catches were also taken off Nova Scotia.

PACIFIC COAST SALMON FISHERY, 1970

Landings of 410.1 million pounds worth a record \$98.7 million were 142.3 million pounds (53 percent) and \$35.8 million (57 percent) more than in 1969. The harvest was the largest since 1949. A sharp increase in red salmon landings in Alaska and near-record silver salmon landings in Washington and Oregon were the principal reasons for the greater production.

Landings increased in all States. Alaska landings were 346.5 million pounds worth \$68.0 million--a gain of 127.3 million pounds and \$25.5 million compared with 1969. Alaska accounted for 84 percent of the total salmon landings and 69 percent of the total value. Red salmon landings in Alaska were 150.8 million pounds--79.1 million more than in 1969, and the best harvest since 1938. Compared with 1969, salmon landings in Washington (37.6 million pounds) increased 18 percent, and in Oregon (19.4 million) 84 percent. Sharply increased silver salmon landings in both States were the principal reason for the gain. California landings of chinook and silver salmon were 6.6 million pounds worth \$5.1 million--a gain of 7 percent in volume and 33 percent in value compared with 1969.

Gill nets accounted for 204.6 million pounds (50 percent); purse seines, 171.7 million (42 percent); and lines, 32.4 million pounds (nearly 8 percent). Less than 1 percent was taken with reef nets, floating traps, dip nets, haul seines, pound nets, wheels, and otter trawls.

REVIEW OF CERTAIN MAJOR FISHERIES

413

ATLANTIC COAST TUNA FISHERY, 1970

Tuna landings along the Atlantic coast were 6.6 million pounds worth \$948,000--an increase of 3.9 million pounds and \$566,000 compared with 1969. A sharp increase in landings of bluefin tuna, principally in New Jersey, accounted largely for the gain. Bluefin tuna was 96 percent of the total harvest.

There were 33 fishermen using 3 purse seine vessels and 3 motor boats landing tuna at ports in the New England and Middle Atlantic States. Purse seines took 93 percent of the harvest, and harpoons, lines, and pound nets took 2 percent each. A small quantity was taken with otter trawls, floating traps, haul seines, and gill nets.

REVIEW OF CERTAIN MAJOR FISHERIES

PACIFIC TUNA FISHERY, 1970

Domestic landings of tuna at Pacific Coast and Hawaii ports were 386.9 million pounds worth \$74.0 million—a gain of 64.7 million pounds (20 percent) and \$19.5 million (36 percent) compared with 1969. The principal reason for the increased volume was record landings of yellowfin tuna, 237.4 million pounds (up 15 percent); near-record landings of albacore, 56.1 million (up 17 percent); and a marked increase in landings of skipjack tuna, 84.2 million pounds (up 62 percent). Bluefin tuna landings, however, were 43 percent less than in 1969. The greater value resulted chiefly from a sharp increase in the average price per pound received by fishermen for albacore tuna, and from smaller increases in the prices of bluefin, skipjack, and yellowfin tuna.

In accordance with the recommendation of the Inter-American Tropical Tuna Commission, the 1970 quota of yellowfin tuna from the eastern tropical Pacific was held to 120,000 tons. The fishery opened January 1 and closed March 23, 1970. It was the fifth consecutive year that this fishery operated under a quota system designed to maintain the yellowfin population at the maximum sustainable yield.

A total of 7,621 fishermen, 1,420 vessels, and 596 motor boats were employed in the Pacific tuna fisheries—a decline of 29 fishermen, 599 vessels, and 28 motor boats compared with 1969. Purse seines, the principal gear used in taking bluefin, skipjack, and yellowfin tuna, accounted for 76 percent of the landings. Lines, used mainly in taking albacore tuna, accounted for the remaining 24 percent.

REVIEW OF CERTAIN MAJOR FISHERIES

U.S. MENHADEN FISHERY, 1970

Menhaden landings were 1.8 billion pounds--an increase of 292.0 million pounds compared with 1969, and the best production since the record harvest of 1962. Menhaden was 37 percent of the U.S. landings--compared with 35 percent in 1964 and 44 percent in 1962.

Gulf States landings were greater than Atlantic coast landings for the eighth consecutive year. They accounted for 66 percent of the total. On the Atlantic coast, the Chesapeake States had 24 percent of the landings, followed by the South Atlantic States (7 percent); Middle Atlantic States (2 percent); and the New England States (1 percent).

Purse seines accounted for 97 percent of the landings. The rest was taken by haul seines, otter trawls, pound nets, floating traps, fyke and hoop nets, gill nets, and trammel nets.

There were 2,066 fishermen, 124 vessels, 293 motor boats, and 2 other boats employed in the menhaden purse seine fishery.

U.S. CLAM FISHERY, 1970

Record landings of 99.2 million pounds of clam meats worth a record \$28.8 million were 18.5 million pounds (23 percent) and \$3.6 million (14 percent) more than in 1969, the former record year. The harvest increased in all regions, with record landings in the Middle Atlantic States (63.3 million pounds) and the Chesapeake States (22.7 million pounds). The Middle Atlantic States led with 64 percent of the landings, followed by the Chesapeake States with 23 percent; New England, 11 percent; and the Pacific Coast, Gulf and South Atlantic States with the remaining 2 percent.

Record landings of 67.3 million pounds of surf clam meats increased 36 percent compared with 1969, and contributed substantially to the greater production. Surf clams, landed principally in New Jersey, accounted for 68 percent of the total volume; hard clams were 16 percent, and soft clams, 13 percent. The rest consisted of geoduck, horse, ocean quahog, rangia, razor, sunray venus, and mixed clams. A fishery for geoduck clams developed in Washington. These large "king" clams with enormous necks were in Puget Sound where they were reached by divers using underwater air or water jets. Most of the clams were steaked for restaurant use.

Dredges took 80.4 million pounds (81 percent); hoes, 6.6 million (7 percent); rakes, 6.2 million (6 percent); and tongs, 4.4 million pounds (4 percent). The rest of the landings were taken with shovels or gathered by hand.

In Section 13 of this digest, under the heading "Conversion Factors", there is a table which gives the average State yield per U.S. standard bushel for clams taken on the Atlantic and Gulf coasts. Supplementary shellfish tables appear after the summary tables for each Atlantic and Gulf regional section.

SOFT CLAM

REVIEW OF CERTAIN MAJOR FISHERIES

U.S. CRAB FISHERY, 1970

Crab landings of 277.2 million pounds worth \$39.2 million increased 19.9 million pounds but declined \$3.9 million compared with 1969.

The harvest was greater in all areas and increased sharply in the Chesapeake and Pacific Coast States. Chesapeake blue crab landings of 69.8 million pounds were 15 percent more than in 1969. Most of the gain was in Virginia where landings of 43.3 million pounds increased 22 percent. The Pacific Coast States harvest was 125.6 million pounds--an increase of 8.1 million compared with 1969. Record landings of dungeness crabs (58.5 million pounds) and snow crabs (14.5 million) accounted largely for the gain. Compared with 1969, Oregon landings of dungeness crabs (14.9 million pounds) increased 53 percent and California landings (15.4 million) nearly doubled. Alaska and Washington landings of dungeness crabs declined moderately however, and Alaska landings of king crabs (52.1 million pounds) declined for the fourth consecutive year.

The Pacific Coast States led in volume with 125.6 million pounds (45 percent) followed by the Chesapeake States with 69.8 million (25 percent); South Atlantic States, 42.9 million (15 percent); and Gulf States, 35.6 million pounds (13 percent). The rest was landed in the New England and Middle Atlantic States, and in Hawaii.

The use of crab dredge operating units was confined to Virginia. A total of 465 fishermen operated 324 crab dredges measuring 554 yards at mouth. Of this number, 447 fishermen were on 173 vessels and 18 fishermen were on 18 motor boats. Fifty vessels were 5 to 9 tons; 67, 10-19 tons; 34, 20-29 tons; 13, 30-39 tons; 5, 40-49 tons; 1, 50-59 tons; 2, 60-69 tons; and 1, 70-79 tons. The total tonnage was 3,007 gross tons.

DUNGENESS CRAB

REVIEW OF CERTAIN MAJOR FISHERIES

U.S. OYSTER FISHERY, 1970

The U.S. oyster fishery yielded 53.6 million pounds of meats worth \$29.5 million--an increase of 1.4 million pounds and \$1.9 million compared with 1969. Landings increased in all areas except the South Atlantic States and the Gulf States. In the South Atlantic States landings of 1.6 million pounds declined 11 percent compared with 1969. Gulf States landings of 17.7 million pounds declined 10 percent--reflecting the damage inflicted by hurricane Camille in 1969.

The Chesapeake States led in production with 24.7 million pounds of oyster meats, followed by the Gulf States, 17.7 million, and the Pacific Coast States, 8.0 million pounds. The Chesapeake and Gulf States accounted for 79 percent of the landings.

Dredges took 29.8 million pounds (56 percent) of the oyster landings, and tongs, 23.2 million (43 percent). The rest was taken with rakes and forks, or gathered by hand.

In Section 13 of this digest is a table which gives the volume of the bushel measures used for oysters in the various Atlantic and Gulf States and the average yield per bushel. Supplementary shellfish tables appear after the summary tables for each Atlantic and Gulf regional section.

REVIEW OF CERTAIN MAJOR FISHERIES

U.S. SHRIMP FISHERY, 1970

Shrimp landings were a record 367.5 million pounds (heads-on) worth a record \$129.8 million--an increase of 48.9 million pounds and \$5.3 million compared with 1969. Shrimp retained its position as the most valuable U.S. fishery. The exvessel value of landings increased in all areas except the South Atlantic States.

Compared with 1969, the shrimp harvest declined in the New England and South Atlantic States. This decline was offset, however, by record landings in the Pacific Coast States and near-record landings in the Gulf States. For the fourth consecutive year landings in the Gulf States exceeded 200 million pounds. The Gulf States accounted for 230.5 million pounds (63 percent of the total); Pacific Coast, 92.9 million (25 percent); New England, 23.5 million (6 percent); and South Atlantic, 20.6 million pounds (6 percent). A negligible amount was taken in the Mississippi River States and in Hawaii.

The otter trawl fleet took 366.3 million pounds--99.7 percent of the total. An additional 1.2 million pounds were taken by bag nets, beam trawls, pots and traps, and brush traps.

The U.S. otter trawl fishery employed 19,179 fishermen on 4,614 vessels and 5,526 motor boats. Texas led in number of vessels (5 net tons or more) with 1,723.

REVIEW OF CERTAIN MAJOR FISHERIES

445

U.S. FISH OTTER TRAWL FLEET, 1970

The following tables contain information on the U.S. fish otter trawl fleet. The data include detailed information on the operating units in this fishery and a breakdown of vessels by area, State, and gross tonnage. The fish otter trawl fleet employed 4,723 fishermen on 1,142 vessels (craft of 5 net tons or more) and 175 boats. Sixty-nine vessels used two trawls, which brought the total number of trawls in use to 1,386.

SECTION 13

STATISTICAL SURVEY PROCEDURE

"Fishery Statistics of the United States" (Statistical Digest) is prepared by the Statistics and Market News Division, National Marine Fisheries Service (NMFS); U.S. Department of Commerce, and is a continuation of a series inaugurated by predecessor organizations in the Department of Interior, Commerce, and Commerce and Labor, and the U.S. Fish Commission. The Statistical Digest contains detailed statistics and analytical textual reviews on the commercial fisheries of the United States. Included are data on the quantity and value of the commercial landings of fishery products by States, larger geographic regions and gear; and the number of persons, vessels, boats, and fishing gear engaged in the fisheries. In the sections on the Great Lakes and Mississippi River, the catch is also tabulated by water bodies. The Statistical Digest also contains data on the volume and value of processed fishery products, freezings and cold storage holdings, foreign trade, and other related information.

Following is a brief history of the statistical surveys that have been conducted in the United States and a description of the procedures used to collect the different kinds of data in the various geographical areas of the country.

History--The first comprehensive statistical study of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the U.S. National Museum, and associates, with the cooperation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries or geographic areas for years prior to 1880, also were collected in the early survey and recorded in Mr. Goode's reports. The survey for 1880, however, did not include the Mississippi River and its tributaries. Periodic general surveys of a limited number of States or limited areas of the United States were made for the years from 1880 to 1907 and from 1909 to 1928. The first complete statistical canvass of the entire United States was made for 1908 by the Bureau of the Census. The next general survey of the entire United States was not made until 1931, although complete data for all areas, excluding the Mississippi River and its tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for these same sections were also collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on the wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Various geographic areas were surveyed during the years from 1933 to 1949, inclusive. A complete survey of all sections of the country was made for 1950. Since 1951, all of the coastal areas have been canvassed annually, and catch records have been obtained for the Great Lakes area. Complete operating unit and catch data have been obtained for all areas since 1954, except that only a partial survey of the Mississippi River and its tributaries was made for 1961. Data on the wholesale and manufacturing industries were collected in all of the surveys from 1933 to 1940, inclusive. In the years from 1941 to 1949, inclusive, and in 1951, lack of experienced personnel and budgetary limitations precluded the collection of data on wholesale and manufacturing firms except for those data collected as part of the canned fishery products, industrial products, and packaged fish surveys.

The chart on page 452 indicates the years for which surveys have been made in the various sections. Since the surveys of the fisheries have varied in completeness, three legends have been used for the years shown in the chart to indicate whether complete, partial, or no surveys were conducted in the individual regions. The designation "complete survey" has been used to indicate that basic operating unit and catch data were obtained and that complete information was collected on employment in wholesale and manufacturing establishments and on the production of manufactured fishery products. The legend "partial survey" usually indicates that operating unit

and catch statistics were collected, but that no information was obtained on employment in wholesale and manufacturing establishments and that only partial data were obtained on the production of manufactured fishery products. In some instances the designation "partial survey" is used for regions in which only catch statistics were collected. The legend "no survey" indicates that a general canvass was not conducted to obtain operating unit, catch, employment in wholesale and manufacturing plants, and complete manufactured products data. Although the chart indicates that in certain regions no surveys were conducted, some information may be available on the landings at certain important ports. Likewise, information on the catch of certain species, such as menhaden, may be available as a result of data collected in connection with the annual canned fish and byproducts survey. Data on the annual production of canned fishery products and byproducts have been collected for all regions since 1921, while information has been obtained on the production of packaged fish for 1926 and annually since 1928.

A bibliography listing the various surveys made since 1880 and the publications in which the results were published appeared in Statistical Digest No. 43. "Fishery Statistics of the United States, 1956." Figures for recent years are available from NMFS in bulletin form, but data for the earlier years are available only in the Fish Commission and Bureau of Fisheries printed reports. These reports are on file in the Department of Commerce library and in many public libraries.

Field Personnel--The statistics contained in this volume have been collected by trained fishery reporting specialists of the National Marine Fisheries Service (NMFS) and, in some cases, by personnel of State fishery agencies. The fishery reporting specialists are assigned to field stations, generally in the principal port within their areas, and travel from that station to conduct their various surveys.

Period Covered--Most of the reporting agents collect statistics on landings for the current year and assemble final operating unit, catch, and processed products data for the previous year. It is usually 3 to 10 months after the end of the calendar year for which they are collecting data before the final figures for the Digest are available. The data are tabulated and prepared for publication as soon as possible after the end of the year. The figures are collected and published on a calendar year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; this is, from September to April, inclusive. Since 1930, they have been collected on a calendar year basis.

Scope--The coastal statistical surveys include canvasses of the commercial fisheries of the oceans, bays, and coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadromous species. Statistics on the fisheries of the Mississippi River include those of the Mississippi River proper as well as all of its tributaries wherein commercial fishing for either fish, crustaceans, or mollusks is carried on. Statistics on the fisheries of the Great Lakes cover canvasses of the fisheries of the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries in Lake Okeechobee and other inland lakes. Surveys for statistics of the wholesale and processing fishing industries cover plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

Methods of Collection--There are several methods used to collect fishery statistics, each of which has been carefully studied to obtain the best results with available personnel and funds. In the preparation of operating units data, field personnel are supplied with a deck of prepunched vessel cards obtained from the Bureau of Customs. These cards indicate the name, official number, rig code, gross tonnage, length, and year built. Field personnel enter the number of crewmen, and number and type of gear used by the vessel. These data are obtained by interview. Data on the craft of less than 5 net tons are obtained from State conservation agencies and by contact with firms purchasing fish or shellfish from fishermen. The data thus obtained are machine processed to ensure accuracy.

COMPLETE SURVEY
 PARTIAL SURVEY
 NO SURVEY

Data on over 96 percent of the catch are available from summaries of monthly landings bulletins and other current records assembled by NMFS or the various States. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited, and data are obtained from them on their purchases of fish and shellfish. It is impossible for the few Service representatives available for this work to interview each fisherman in a given locality. However, the more important areas and a sufficient number of areas of lesser importance are visited to obtain reliable information on production, the number of fishing craft engaged, the quantity of gear operated, catch by gear and waters, and the number of persons employed as fishermen.

The Service's role with regard to fishery statistics is principally that of coordinating the collection of information and assembling, analyzing, publishing, and disseminating fishery data. The State fishery agencies in a number of States have developed relatively complete statistical systems which greatly facilitate the Service's surveys in these States. In such instances, the Service conducts only such surveys as may be necessary to make the data comparable with those of other States.

NMFS obtains from the records of the State fishery agencies most of the catch statistics for the fisheries of the Great Lakes, the northern Mississippi River area, and the International Lakes of northern Minnesota. To obtain data on the number of fishermen, boats, vessels, and gear, the Service conducts such personal surveys among the fishermen as may be necessary to supplement the State records.

NMFS statistical personnel are stationed at Seattle, Wash. and Terminal Island, Cal. for the purpose of surveying the fisheries of Washington, Oregon, and California. They obtain from the records of the State fishery departments figures on the volume of the catch and operating units. The value of the catch is derived from State and dealers records. In Washington and Oregon, data for operating units in the offshore fisheries are obtained from the records of various fishery organizations as well as from records of the State fishery agencies. Statistics on the wholesale fishery industry for this section are obtained largely by personal interviews.

In many States, NMFS and the fishery agency of the respective States cooperate in the collection and publication of current monthly and annual data on the catch. These data form the basis of the annual catch figures published in the Digest for the following States: Maine, Massachusetts, Rhode Island, New York, New Jersey, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Ohio, Michigan, and Wisconsin.

In the administration of the Alaska fisheries, the State requires that copies of all receipts for fish and shellfish purchases from fishermen be furnished to the Alaska Department of Fish and Game. The data on these tickets are compiled and made available to NMFS. The summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish in the Great Lakes States usually are shown in weights as landed, which may be in the round or drawn condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are usually shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the case of univalve and bivalve mollusks, and round weight in the case of crustaceans and such cephalopods as squid and octopus.

STATISTICAL SURVEY PROCEDURE

Shore and Vessel Fisheries--In general, statistics of the shore fisheries collected by NMFS representatives include data on the number of casual and regular fishermen; number of motor and other fishing boats (craft of less than 5 net tons capacity are called "boats"); type and quantity of gear used; and the volume, value, and method of capture of each species for each locality or group of localities. The availability of data collected by some State fishery agencies obviates the necessity of detailed surveys by NMFS personnel.

Statistics on the vessel fisheries include data on the number in the crew; rig of vessels; gross tonnage; kind and quantity of gear used; and volume, value, and method of capture of each species. Craft having a capacity of 5 net tons or over are called "vessels." As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of Service agents collecting these data for individual vessels. Information on the year vessels were built was assembled for 1961 and 1966.

Statistics on the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not reported.

All persons engaged in commercial fishing operations are included as fishermen. In most areas, fishermen not on vessels have been divided into "regular" and "casual." Regular fishermen are defined as those who receive more than one-half their annual income from fishing, whereas casual fishermen are those who receive less than one-half their annual compensation from fishing. It has not been possible to separate regular from casual fishermen on the Pacific Coast.

Since 1942, the catch of fish and shellfish has been credited to the port at which it was landed. Prior to the survey for that year, it was the practice of NMFS to credit the entire catch of a vessel to the principal port at which fish or shellfish were unloaded, regardless of the actual home port of the vessels. This policy was discontinued since it quite often resulted in inconsistencies by crediting landings of some species to areas far removed from localities in which they are commonly taken. An outstanding example of this is the southern trawl fishery conducted off the New Jersey, Maryland, Virginia, and North Carolina coasts. Some fishing vessels from New England operate in this fishery for 6 to 10 weeks during the winter season. Prior to the survey for 1942, the catch of these vessels, consisting principally of fish common to Middle Atlantic waters, was credited to Massachusetts. Under the present system, this catch is credited to the Middle Atlantic ports where it is landed.

Since 1949 on the Pacific Coast and 1951 for the remainder of the country, craft, fishermen, and gear have been reported for each State in which they fished. A total exclusive of duplication is shown for each section and for the United States as a whole. Prior to the surveys for 1949, each craft on the Pacific Coast was credited to its home port unless it did not fish from that port during the year. In that case, it was credited to the locality where it landed the greatest portion of its catch. Prior to the survey for 1951, each craft on the Atlantic and Gulf Coasts and interior waters was credited to the port where it landed the greatest portion of its catch during the year. This system was changed to provide more accurate data on the total number of craft operating in a given State. With the increased mobility of the fishing fleet in recent years, the number of vessels fishing in more than one State has increased greatly.

Beginning with data for 1951, the reporting of units of gear was standardized so that nets or lines made up of small units for ease in handling, but fastened together in fishing, were counted as a single unit rather than as a number of smaller units. Prior to 1951, the small units were sometimes counted as individual pieces of gear even though they were combined for fishing. This rule does not apply to halibut longlines or setlines on the Pacific Coast. In this fishery, each skate of gear is counted as one line, even though fastened together in fishing, because the International Pacific Halibut Commission uses a skate as a unit in its studies of fishing intensity.

Beginning with 1962, only summary data have been shown on the number of fishing gear operated in the Great Lakes and the International Lakes of northern Minnesota. These data appear in the General Review section of the Digest in the table "Summary of Operating Units." In detailed operating unit tables for these lakes, the number and size of gear have been replaced by information on the fishing effort expended in the operation of each gear.

Publication of Data--Statistics on employment in the fisheries, craft and gear engaged, quantity and value of catch, and certain data on industries related to the fisheries are summarized according to geographic divisions and published in bulletin form as soon as possible after the completion of each survey. Later, the figures, in more detail, are included in this statistical report.

Data on the operating units (fishermen, fishing craft, and gear) and catch by counties for the Atlantic and Gulf States have been included in these annual statistical reports for the years from 1928 to 1938 except for 1932. These data have also been published in the digests for the years 1945, 1950, 1955, and 1960. County data were collected for the State in which surveys were conducted during the years since 1938, except for Maryland. Between 1942 and 1959, only operating unit data by counties have been obtained for Maryland. Complete data were obtained for 1960. County data assembled for the years since 1938 which were not published in the Digest are on file in the Washington Office of the Statistics and Market News Division.

LOCAL AND SPECIAL SURVEYS

Landings at Certain Massachusetts Ports--Detailed statistics are collected on the landings of aquatic products by individual fishing craft at Boston, Gloucester, New Bedford, Plymouth, Provincetown, and other Cape Cod ports. Data on the landings at Boston and Gloucester have been collected annually since 1893. Information on landings at New Bedford has been collected annually since 1938; and at Plymouth, Provincetown, and other Cape Cod ports since 1945. NMFS representatives are stationed at the principal ports. They obtain figures on the quantity and value of fish landed daily by fishing craft, the dates of departure and arrival of the craft, the gear used in their capture, the grounds from which the fish were taken, and other related information. The Service's Office of Resource Research cooperates in the collection of these data.

Statistics on landings at the above ports are released monthly and annually in bulletin form, and summary data are published in the annual Statistical Digest.

Shad and Alewife Fisheries--Surveys for statistics on the catch, value of catch, and operating units in the Hudson and Potomac River shad fisheries are made annually. On the Potomac River, similar statistics are also obtained for the alewife fishery. Much of the data required for these surveys is available from the States' fishery agencies.

Annual data on the shad and alewife fisheries are not published separately in bulletin form. However, a summary is published in the Digest.

Statistics on the Hudson River shad fishery are available for 1896, 1897, 1898, 1901, 1904, 1910, and continuously since 1915. Data for the Potomac River shad fishery are available for 1896, 1901, 1904, 1909, 1915, from 1919 to 1942, inclusive, and continuously since 1944. Statistics on the Potomac River alewife fishery are available for 1896, 1909, 1915, from 1919 to 1942, inclusive, and continuously since 1944.

Pacific Halibut Fishery--Statistics on the Pacific halibut fishery are obtained primarily from the International Pacific Halibut Commission. Beginning with data for 1956, the fleet classification of halibut craft was revised and vessels were credited in operating unit tables to each district in which they landed fish; the only exception being the U.S. vessels landing at Prince Rupert, British Columbia, are credited to Southeastern Alaska. Duplication of halibut craft which

STATISTICAL SURVEY PROCEDURE

operated in more than one district has been eliminated in regional and national totals. The catch by the halibut fleet is credited to the port of landing except that fish landed by U.S. halibut craft in British Columbia, is credited to Southeastern Alaska. Halibut statistics are also included in the monthly and annual summaries published by the Seattle Fishery Market News Office. Statistics on the landings of halibut at Pacific Coast ports have been collected since 1925.

South Atlantic and Gulf of Mexico Shrimp Fishery--Detailed statistics on quantity and value of shrimp, by variety and size, landed at South Atlantic and Gulf ports, have been collected for the Gulf area since 1956 and the South Atlantic since 1957. Since 1956, NMFS personnel have also obtained daily information on the number of fishing trips, area and depth fished, and time spent fishing for craft landing at U.S. ports in the Gulf of Mexico. Various fishery agencies of the southern States cooperate in the collection of these data.

Detailed monthly and annual summaries of the statistics on shrimp catch and landings are published in bulletin form and are summarized in the Statistical Digests.

Historical Fishery Statistics--NMFS has in its files and in various reports or publications, a large volume of historical data on fisheries. Beginning with the 1951 Digest, a section entitled "Historical Fishery Statistics," which includes complete historical information on selected species, has been carried. There is published each year a listing of the titles of the series of data appearing in earlier editions.

Review of Certain Major Fisheries--For the years 1942-66, tabulations containing complete data on the catch of certain major species, have been included in a section of the Digest entitled "Review of Certain Major Fisheries." Although the data are included in the detailed catch tables of the various States, they are consolidated in this section to provide a single source of data for cod, haddock, halibut, menhaden, Atlantic ocean perch, salmon, tuna, oysters, clams, crabs, and shrimp. Data on operating units in the following fisheries have likewise been consolidated in this section: halibut, salmon purse seine and troll line, Atlantic and Pacific Coast tuna, menhaden purse seine, fish and shrimp otter trawls.

Canned Fishery Products and Industrial Products--Since 1921, NMFS has made annual sectional surveys for statistics on canned and industrial fishery products. These surveys are started the first week in January of each year for statistics on the production in the preceding year. So far as possible, the Service obtains by mail, statistics on the annual production of each domestic canned and industrial fishery products plant. If it is impossible to obtain the information by mail, the report is secured by a NMFS representative. Included in the data obtained are statistics on the yield and value of the canned products by type of commodity, can size, and area of production. Data on industrial products are obtained by commodity and area of production. The value shown for canned and industrial products is the gross amount received by the packer at the production point. No deductions are made for commissions or expenses.

Annual statistical bulletins are issued on this trade, and detailed data are published in the Statistical Digest. Prior to 1921, canned and industrial products data were not collected for the entire country. However, data on the production of these products were usually obtained for the areas in which general canvass surveys were conducted.

Fish Meal and Oil--Data are collected monthly on the domestic production of fish meal, body oil and fish solubles. This information is released monthly and annually in the Service's Current Fishery Statistics series of bulletins.

Fish Fillets and Steaks--Statistics on the annual production and value of fish fillets and steaks in the United States are obtained in conjunction with the canned and industrial fishery products survey. These data are released annually in bulletin form and in the annual Statistical Digest. Statistics on the production of fillets and steaks are available for 1926 and annually since 1928, except that no data were collected in California for the years 1941 to 1946, inclusive.

Fish Sticks and Portions--Quarterly information is collected and published on the production and value of breaded, cooked and raw fish sticks, breaded, cooked and raw fish portions, and unbreaded fish portions. The data are released in the Service's Current Fishery Statistics series of bulletins.

Cold-Storage Holdings of Fish--Information on the monthly freezings and holdings of fishery products is obtained from cold storage warehouses by mail and by NMFS employees. Data are also obtained on the holdings of certain cured fish. Bulletins showing these statistics are issued monthly and annually.

Detailed cold-storage statistics also are published in the Statistical Digest. Information regarding cold-storage holdings of fishery products has been published since 1917, while data on the quantity of fish frozen have been released for the years from 1920 to 1925, inclusive, and continuously since 1928.

Foreign Fishery Trade--Statistics on foreign trade are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics on all known imported or exported fishery products have been assembled and published annually since 1926 in the Digest. For earlier years, figures are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

PRACTICES AND TERMS

Certain practices and terms used in this report are explained below.

Operating Units--Operating units include persons employed in the fisheries, and craft and gear engaged in the fisheries.

Vessel--A craft having a capacity of 5 net tons or over.

Boat--A craft having a capacity of less than 5 net tons.

Days Absent--In computing "days absent" for vessels landing fares at certain Massachusetts ports, the day of arrival, but not the day of departure, is included; thus, a vessel leaving port on the 8th of the month and returning on the 15th of the month will be credited with 7 days absence. Prior to 1944, "days absent" included both the day of departure and the day of arrival.

Days Fished--In computing "days fished" for fishing craft landing shrimp at Gulf of Mexico ports, the total number of hours spent in fishing effort has been divided by 24.

Fish--The term "fish" as used in this report includes all species belonging to the class Pisces.

Shellfish, et al.--A shellfish is an aquatic invertebrate animal having a shell, such as a mollusk or crustacean. However, in order to reduce the classifications appearing in the catch tables, all items not properly listed as "Fish" or "Whale Products" have been included under "Shellfish, et al." Accordingly, turtles, frogs, sponges, seaweed, and worms are included under this classification.

STATISTICAL SURVEY PROCEDURE

Whale Products--Since data are not available on the poundage of whales taken, statistics appearing in catch tables on the yield of these mammals represent the weight of products produced such as meal, sperm oil, and whale oil. The values shown represent the amount received by the manufacturer for the products.

Incidental Catch--The term "incidental catch" refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

Percentages--Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, add integers are raised to the next even figure while even integers remain unchanged.

Converting--Many of the figures shown in the summary tables published herewith have converted to thousands of pounds or thousands of dollars. In making these conversions the sum of the items in a table is raised or lowered to the nearest thousand in accordance with standard statistical procedures. The individual items are adjusted to conform to the total thus obtained.

Confidential Data--The statistical data collected by the Service are confidential, and, unless specific authorization is given, are not released in a manner that would divulge private enterprise.

CONVERSION FACTORS

It is the policy of the Service to show detailed catch figures of all products in pounds for the sake of uniformity and for the purposes of comparison. This represents little difficulty in the case of fish, since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels, numbers, gallons of meats, etc. So many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various States, the problem becomes even more complex.

All univalve and bivalve mollusks (except fresh-water mussel shells) are reported in pounds of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production in number of certain other shellfish, such as crabs. There also is included in the General Review section of this report a table containing data on the shell weight of univalve and bivalve mollusks taken.

Oysters--Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf Coasts is reported to NMFS personnel in bushels. Prior to the data obtained for the year 1930, bushels were converted to pounds of meats on the basis of a uniform yield of 7 pounds of meats to the bushel. However, it was found that there was considerable variation in the yield of oysters per bushel particularly in Southern States where the yield has ranged as low as half the conversion factor used prior to 1930. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

SECTION 14 - GLOSSARY

In order to prevent misunderstanding in the use of common names employed in the tables and discussions, the following list of common and scientific names is given for fish, shellfish, and other aquatic products taken by United States fishermen.

Common names as shown in Bureau reports	Other common names	Scientific names
FISH		
Alewives	{ Branch herring, big-eyed herring, river herring..... } Blueback, glut herring, shad herring	<i>Alosa pseudoharengus</i>
Amberjack	Jack.....	<i>Alosa aestivalis</i>
Anchovies	<i>Seriola</i> species <i>Engraulis mordax</i> (Pacific)
Angelfish.....	{ <i>Pomacanthus</i> species <i>Angelichthys</i> species
Anglerfish	{ Goosefish, allmouth, headfish, monkfish, bellyfish }	<i>Lophius americanus</i>
Ballyhoo.....	Balao.....	<i>Hemiramphus brasiliensis</i>
Barracuda.....	<i>Sphyræna</i> species
Bluefish.....	Tailor, skipjack.....	<i>Pomatomus saltatrix</i>
Blue pike.....	{ Pike perch, hard pike, blue pickerel (Canada)..... }	<i>Stizostedion vitreum glaucum</i>
Blue runner.....	Runner, hardtail, crevalle.....	<i>Caranx crysos</i>
Bonito.....	{ <i>Sarda sarda</i> (Atlantic) <i>Sarda chiliensis</i> (Pacific)
Bowfin	Fresh-water dogfish, grindle.....	<i>Amia calva</i>
Brown trout	<i>Salmo trutta</i>
Buffalofish	Winter carp.....	<i>Ictiobus</i> species
Burbot.....	Lawyer, ling.....	<i>Lota lota</i>
Butterfish	<i>Poronotus triacanthus</i>
Cabezone.....	Marbled sculpin.....	<i>Scorpaenichthys marmoratus</i>
Cabio.....	Black bonito, cobia, ling, lemonfish.....	<i>Rachycentron canadus</i>
Cabrilla.....	Rock bass.....	<i>Epinephelus analogus</i> (Pacific)
Carp	German carp, summer carp.....	<i>Cyprinus carpio</i>
Catfish and bullheads	{ <i>Ictalurus</i> species <i>Pylodictis olivaris</i>
Chubs.....	{ Longjaw, bluefin, blackfin (United States), tullibee (Canada)..... }	All <i>Leucichthys</i> except <i>artedi</i> (Great Lakes)
Cigarfish.....	Scad.....	<i>Decapterus punctatus</i>
Cisco.....	Herring (Canada).....	<i>Leucichthys artedi</i> (Lake Erie only)
Cod.....	Codfish.....	{ <i>Gadus morhua</i> (Atlantic) <i>Gadus macrocephalus</i> (Pacific)
Crappie	White crappie, calico bass Black crappie	<i>Pomoxis annularis</i> <i>Pomoxis nigromaculatus</i>
Crevalle.....	Common jack, jackfish.....	<i>Caranx hippos</i>
Croaker	Crocus, hardhead.....	<i>Micropogon undulatus</i>
Cunner.....	Chogset, blue perch, bergall.....	<i>Tautoglabrus adspersus</i>
Cutlassfish.....	Silver eel.....	<i>Trichiurus lepturus</i>
Cusk.....	<i>Brosme brosme</i>
Dolly Varden trout.....	Salmon trout, bull trout.....	<i>Salvelinus malma</i>
Dolphin.....	<i>Corphaena hippurus</i>
Drum:	<i>Pogonias cromis</i>
Black.....	Oyster cracker, oyster drum, sea drum.....	<i>Sciaenops ocellata</i>
Red.....	Channel bass, redfish, spotted bass.....

(Continued on next page)

GLOSSARY

Common names as shown in Bureau reports	Other common names	Scientific names
FISH - Continued		
Eel:		
Common	<i>Anguilla rostrata</i>
Conger	<i>Conger oceanicus</i>
Flounders:		
Atlantic and Gulf Coasts:		
Gray sole	<i>Glyptocephalus cynoglossus</i>
Lemon sole	(weighing over 3-1/2 pounds each)	
Blackback	} Winter flounder (weighing under 3-1/2 pounds each)	<i>Pseudopleuronectes americanus</i>
Yellowtail		
Dab	Sea dab	<i>Limanda ferruginea</i>
Fluke	Summer flounder, gulf flounder, flounder..	<i>Hippoglossoides platessoides</i> <i>Paralichthys</i> species
Pacific Coast:		
Arrowtooth halibut	<i>Atheresthes stomias</i>
California halibut	<i>Paralichthys californicus</i>
Sand dabs	<i>Citharichthys sordidus</i>
"Sole":		
Dover	<i>Microstomus pacificus</i>
English	<i>Parophrys vetulus</i>
Petrale	<i>Eopsetta jordani</i>
Rex	<i>Glyptocephalus zachirus</i>
Sand	<i>Psettichthys melanostictus</i>
Unclassified	Pleuronectidae and Bothidae
Flying fish	<i>Cypselurus</i> species
Garfish	Gar, sea gar	<i>Lepisosteus</i> species
Gizzard shad	Nanny shad, mud shad, winter shad	<i>Dorosoma cepedianum</i>
Goldfish	Sand perch, gold perch	<i>Carassius auratus</i>
Groupers	"Sea bass"	} <i>Epinephelus</i> species <i>Mycteroperca</i> species
Grunts	Margate fish, sailors' choice	
Haddock	<i>Haemulon</i> species
Hake:		
Red	Squirrel hake, ling, black hake, mud hake	<i>Urophycis chuss</i> (Atlantic)
White	Hake	<i>Urophycis tenuis</i> (Atlantic)
Pacific	Merluccio	<i>Merluccius productus</i> (Pacific)
Halfmoon	Rudder fish	<i>Medialuna californiensis</i>
Halibut	} <i>Hippoglossus hippoglossus</i> (Atlantic) <i>Hippoglossus stenolepis</i> (Pacific)
Hardhead	Sacramento rockfish	
Harvestfish	} Starfish st , dollarfish, pappyfish, butterfish (N.C.)	<i>Orthodon microlepidotus</i> (Pacific)
Herring:		
Lake	Herring	} <i>Leucichthys artedii</i> (Great Lakes except Erie)
Sea	
Thread	} <i>Clupea harengus</i> (Atlantic) <i>Clupea pallasii</i> (Pacific)
		<i>Opisthonema oglinum</i>

Bloodworms.....	Glyceridae
Sandworms.....	<i>Nereis</i> species

SECTION 15 - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which commercial landings are made in the United States and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types which are normally used in their capture. The gear do not necessarily appear in the order of their importance. Illustrations of species landed in Hawaii are not included in this section.

For more detailed information on the nomenclature of the fishery products listed below, the reader is referred to Section 14 of this publication entitled, "Glossary."

ALEWIFE
RANGE - FLORIDA TO NEW ENGLAND
GEAR - POUND NETS, GILL NETS, WEIRS,
DIP NETS, HAUL SEINES, FLOATING TRAPS,
FYKE NETS

ANGLERFISH
RANGE - NEW JERSEY TO MASSACHUSETTS
GEAR - OTTER TRAWLS, POUND NETS

AMBERJACK
RANGE - FLORIDA
GEAR - HANDLINES, TROLL LINES

ANCHOVY
RANGE - CALIFORNIA TO WASHINGTON
GEAR - PURSE SEINES AND HAUL SEINES

ANGELFISH
RANGE - FLORIDA
GEAR - HAUL SEINES

BARRACUDA (ATLANTIC)
RANGE - FLORIDA
GEAR - TROLL LINES, HANDLINES

BARRACUDA (PACIFIC)
RANGE - CALIFORNIA
GEAR - PURSE SEINES, LONGLINES, HANDLINES,
TROLL LINES, GILL AND TRAMMEL NETS

PICTORIAL SECTION

BLUEFISH
 RANGE - GULF OF MEXICO TO NEW ENGLAND
 GEAR - HAUL SEINES, GILL NETS, POUND NETS,
 TROLL LINES, PURSE SEINES

BURBOT
 RANGE - GREAT LAKES
 GEAR - GILL NETS, FYKE NETS, POUND
 NETS, TRAP NETS

BLUE RUNNER OR HARDTAIL
 RANGE - GULF OF MEXICO
 GEAR - HAUL SEINES, GILL NETS, POTS

BUTTERFISH
 RANGE - FLORIDA TO NEW ENGLAND
 GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

BONITO (ATLANTIC)
 RANGE - NORTH CAROLINA TO MASSACHUSETTS
 GEAR - POUND NETS, TROLL LINES, GILL NETS

CABIO
 RANGE - FLORIDA TO VIRGINIA
 GEAR - HANDLINES, POUND NETS

BOWFIN
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

CARP
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, GILL NETS, TRAP NETS,
 FYKE NETS, POUND NETS, TROT LINES

BUFFALOFISH
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, FYKE NETS, TRAMMEL
 NETS, TROT LINES

CATFISH
 RANGE - FRESH-WATER
 GEAR - HAUL SEINES, TROT LINES, POUND
 NETS, POTS, FYKE NETS

PICTORIAL SECTION

CHUB
RANGE - GREAT LAKES
GEAR - GILL NETS

CROAKER
RANGE - GULF OF MEXICO TO NEW YORK
GEAR - POUND NETS, OTTER TRAWLS, HAUL SEINES,
GILL NETS

CIGARFISH
RANGE - FLORIDA
GEAR - HAUL SEINES

CUNNER
RANGE - NEW ENGLAND
GEAR - OTTER TRAWLS, HANDLINES

COD
RANGE - VIRGINIA TO MAINE, WASHINGTON,
AND ALASKA
GEAR - OTTER TRAWLS, LONGLINES, GILL NETS

CUSK
RANGE - NEW ENGLAND
GEAR - OTTER TRAWLS, LONGLINES

CRAPPIE
RANGE - FRESH-WATER LAKES
GEAR - HAUL SEINES, LINES, POTS

DOLLY VARDEN TROUT
RANGE - PACIFIC
GEAR - POUND NETS, GILL NETS, LINES

CREVALLE
RANGE - SOUTH ATLANTIC AND GULF STATES
GEAR - HAUL SEINES, GILL NETS, LINES

DOLPHIN
RANGE - FLORIDA TO NORTH CAROLINA
GEAR - TROLL LINES

PICTORIAL SECTION

DRUM, BLACK
RANGE - TEXAS TO NORTH CAROLINA
GEAR - HAUL SEINES, POUND NETS, LINES

LEMON SOLE
RANGE - NEW YORK TO MAINE
GEAR - OTTER TRAWLS

DRUM, RED
RANGE - TEXAS - MARYLAND
GEAR - POUND NETS, HAUL SEINES, GILL NETS,
LINES

DAB
RANGE - MASSACHUSETTS TO NOVA SCOTIA
GEAR - OTTER TRAWLS, LONGLINES

EEL, COMMON
RANGE - FLORIDA TO NEW ENGLAND AND IN
MISSISSIPPI RIVER, LAKE ONTARIO
GEAR - POTS, SPEARS, POUND NETS

BLACKBACK OR WINTER FLOUNDER
RANGE - NORTH CAROLINA TO MAINE
GEAR - OTTER TRAWLS, POUND NETS, FYKE NETS,
SPEARS, LINES

EEL, CONGER
RANGE - FLORIDA TO NEW ENGLAND
GEAR - OTTER TRAWLS

FLUKE
RANGE - TEXAS TO MASSACHUSETTS
GEAR - OTTER TRAWL, SPEARS, LINES

GRAY SOLE
RANGE - MASSACHUSETTS TO MAINE
GEAR - OTTER TRAWLS

FLYING FISH
RANGE - PACIFIC AND ATLANTIC OCEANS
GEAR - GILL NETS

PICTORIAL SECTION

FRIGATE MACKEREL
RANGE - MIDDLE ATLANTIC
GEAR - POUND NETS

GARFISH
RANGE - FRESH-WATER
GEAR - HAUL SEINES, LINES

GIZZARD SHAD
RANGE - NORTH CAROLINA TO MARYLAND,
GREAT LAKES
GEAR - HAUL SEINES, POUND NETS, GILL NETS

GOLDFISH
RANGE - LAKES AND RIVERS
GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

GRAYFISH
RANGE - PACIFIC
GEAR - LONGLINES, OTTER TRAWLS, GILL NETS

GROUPE
RANGE - TEXAS TO SOUTH CAROLINA
GEAR - HANDLINES, POTS

GRUNT
RANGE - FLORIDA
GEAR - POTS, GILL NETS, LINES

HADDOCK
RANGE - NEW ENGLAND STATES
GEAR - OTTER TRAWLS, GILL NETS, LONGLINES

HAKE, RED
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - GILL NETS, OTTER TRAWLS, LONGLINES

HAKE, WHITE
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - GILL NETS, OTTER TRAWLS, LONGLINES

HAKE (PACIFIC)
RANGE - PACIFIC
GEAR - OTTER TRAWLS

HALIBUT
RANGE - PACIFIC COAST - NEW ENGLAND
GEAR - LONGLINES, OTTER TRAWLS

PICTORIAL SECTION

HARDHEAD
RANGE - CALIFORNIA
GEAR - FYKE NETS

HOGCHOKER
RANGE - CHESAPEAKE BAY
GEAR - POUND NETS, HAUL SEINES

HARVESTFISH OR "STARFISH"
RANGE - NORTH CAROLINA TO CHESAPEAKE BAY
GEAR - HAUL SEINES, POUND NETS

HOGFISH
RANGE - FLORIDA
GEAR - LINES

HERRING, LAKE
RANGE - GREAT LAKES
GEAR - GILL NETS, HAUL SEINES, POUND NETS,
TRAP NETS

JEW FISH
RANGE - FLORIDA
GEAR - HANDLINES

HERRING, SEA
RANGE - NEW JERSEY TO NEW ENGLAND, PACIFIC
COAST STATES AND ALASKA
GEAR - PURSE SEINES, WEIRS, FLOATING TRAPS,
STOP SEINES

JOHN DORY
RANGE - MIDDLE ATLANTIC STATES
GEAR - OTTER TRAWLS

HICKORY SHAD
RANGE - FLORIDA TO RHODE ISLAND
GEAR - POUND NETS, HAUL SEINES, GILL NETS
FLOATING TRAPS

PICTORIAL SECTION

KING MACKEREL
RANGE - TEXAS TO NEW YORK
GEAR - TROLL LINES, GILL NETS, HANDLINES

MACKEREL, ATLANTIC
RANGE - CHESAPEAKE BAY TO MAINE
GEAR - PURSE SEINES, GILL NETS, POUND NETS,
FLOATING TRAPS

KING WHITING
RANGE - TEXAS TO MASSACHUSETTS
GEAR - OTTER TRAWLS, HAUL SEINES, POUND NETS

MACKEREL, JACK
RANGE - CALIFORNIA
GEAR - LINES, SEINES, LAMPARA NETS

LAKE TROUT
RANGE - GREAT LAKES
GEAR - GILL NETS, LINES, POUND NETS (TRAP NETS)

MACKEREL, PACIFIC
RANGE - CALIFORNIA
GEAR - LINES, SEINES, LAMPARA NETS

LAMPREY
RANGE - FRESH-WATER
GEAR - POTS, FYKE NETS

MENHADEN
RANGE - GULF OF MEXICO TO NEW ENGLAND
GEAR - PURSE SEINES, POUND NETS

LAUNCE
RANGE - NEW ENGLAND
GEAR - HAUL SEINES

MOONEYE
RANGE - GREAT LAKES
GEAR - HAUL SEINES

LINGCOD
RANGE - CALIFORNIA TO ALASKA
GEAR - OTTER TRAWLS, LONGLINES, HANDLINES

MOONFISH
RANGE - FLORIDA
GEAR - HANDLINES, HAUL SEINES

PICTORIAL SECTION

MULLET
RANGE - TEXAS TO NEW JERSEY
GEAR - GILL NETS, HAUL SEINES, POUND NETS,
CAST NETS

OCEAN POUT
RANGE - NEW ENGLAND
GEAR - OTTER TRAWLS

OCEAN PERCH
RANGE - NEW ENGLAND
GEAR - OTTER TRAWLS

PADDFISH
RANGE - GULF OF MEXICO, MISSISSIPPI RIVER
GEAR - HAUL SEINES, TROT LINES

PIGFISH
RANGE - FLORIDA
GEAR - POTS, HANDLINES, GILL NETS

PIKE OR PICKEREL
RANGE - FRESH-WATER
GEAR - TRAP NETS, FYKE NETS, GILL NETS,
POUND NETS, HANDLINES

SARDINE, PACIFIC (PILCHARD)
RANGE - CALIFORNIA TO WASHINGTON
GEAR - PURSE SEINES, LAMPARA AND RING NETS,
GILL NETS

PINFISH
RANGE - FLORIDA TO NORTH CAROLINA
GEAR - HAUL SEINES, GILL NETS

POLLOCK
RANGE - MIDDLE ATLANTIC AND NEW ENGLAND STATES
GEAR - LONGLINES, FLOATING TRAPS, POUND NETS,
OTTER TRAWLS, GILL NETS

POMPANO
RANGE - TEXAS TO NORTH CAROLINA
GEAR - TRAMMEL NETS, HAUL SEINES, GILL NETS,
HANDLINES

QUILLBACK
RANGE - FRESH-WATER
GEAR - HAUL SEINES, TROT LINES, FYKE NETS

PICTORIAL SECTION

477

RATFISH
RANGE - WASHINGTON TO ALASKA
GEAR - BEAM TRAWLS, LONGLINES

SALMON, CHINOOK OR KING
RANGE - CALIFORNIA TO ALASKA
GEAR - POUND NETS, PURSE SEINES, GILL NETS,
HAUL SEINES, TROLL LINES, REEF NETS

ROCK BASS
RANGE - GREAT LAKES
GEAR - TRAP NETS, FYKE NETS, HAUL SEINES,
GILL NETS

SALMON, CHUM OR KETA
RANGE - OREGON TO ALASKA
GEAR - POUND NETS, PURSE SEINES, GILL NETS,
HAUL SEINES, REEF NETS

ROCKFISH
RANGE - CALIFORNIA TO ALASKA
GEAR - LINES, OTTER TRAWLS, PARANZELLA NETS,
GILL NETS

SALMON, PINK
RANGE - WASHINGTON TO ALASKA
GEAR - PURSE SEINES, POUND NETS, GILL NETS,
REEF NETS

RUDDERFISH
RANGE - CALIFORNIA
GEAR - LAMPARA AND RING NETS

SALMON, RED OR SOCKEYE
RANGE - OREGON TO ALASKA
GEAR - GILL NETS, PURSE SEINES, POUND NETS,
REEF NETS

SABLEFISH
RANGE - PACIFIC COAST STATES AND ALASKA
GEAR - LONGLINES, OTTER TRAWLS

SALMON, SILVER OR COHO
RANGE - CALIFORNIA TO ALASKA
GEAR - HAUL SEINES, PURSE SEINES, GILL NETS,
TROLL LINES, POUND NETS, REEF NETS

SAUGER
RANGE - GREAT LAKES
GEAR - GILL NETS, HAUL SEINES, TRAP NETS,
FYKE NETS

PICTORIAL SECTION

SCULPIN
RANGE - PACIFIC COAST STATES AND ALASKA
GEAR - LINES, GILL NETS, POTS

SCUP OR PORGY
RANGE - FLORIDA TO NEW ENGLAND
GEAR - OTTER TRAWLS, POUND NETS

SEA BASS
RANGE - FLORIDA TO NEW ENGLAND
GEAR - OTTER TRAWLS, HANDLINES, POTS

SEA CATFISH
RANGE - TEXAS TO CHESAPEAKE BAY
GEAR - OTTER TRAWLS, HAUL SEINES, HANDLINES

SEA ROBIN
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - POUND NETS, OTTER TRAWLS

SEA TROUT OR WEAKFISH, GRAY
RANGE - FLORIDA TO MASSACHUSETTS
GEAR - OTTER TRAWLS, POUND NETS, PURSE SEINES,
GILL NETS, HAUL SEINES

SEA TROUT OR WEAKFISH, SPOTTED
RANGE - MARYLAND TO TEXAS
GEAR - GILL NETS, TRAMMEL NETS, HAUL SEINES,
POUND NETS, OTTER TRAWLS, HANDLINES

SEA TROUT OR WEAKFISH, WHITE
RANGE - GULF OF MEXICO
GEAR - GILL NETS, HAUL SEINES, HANDLINES

SHAD
RANGE - FLORIDA TO NEW ENGLAND
GEAR - GILL NETS, POUND NETS, FYKE NETS,
HAUL SEINES

SHARK
RANGE - ATLANTIC COAST, GULF, PACIFIC COAST STATES
GEAR - LONGLINES, GILL NETS, OTTER TRAWLS

PICTORIAL SECTION

479

SHEEPSHEAD
RANGE - TEXAS TO CHESAPEAKE BAY
GEAR - HANDLINES, POTS

SHEEPSHEAD, CALIFORNIA
RANGE - CALIFORNIA
GEAR - LONGLINES, TRAMMEL NETS

SAND PERCH
RANGE - TEXAS TO NEW YORK
GEAR - HAUL SEINES, GILL NETS, POUND NETS

SILVERSIDES
RANGE - NEW YORK
GEAR - HAUL SEINES, OTTER TRAWLS

SKATE
RANGE - PACIFIC COAST, CHESAPEAKE BAY TO NEW ENGLAND
GEAR - LINES, OTTER TRAWLS, POUND NETS, HAUL SEINES

SKIPPER
RANGE - VIRGINIA TO NOVA SCOTIA
GEAR - POUND NETS, WEIRS

SMELT
RANGE - NEW YORK TO MAINE, PACIFIC OCEAN,
GREAT LAKES
GEAR - POUND NETS, DIP NETS, GILL NETS, HAUL SEINES

SNAPPER, MANGROVE
RANGE - FLORIDA
GEAR - HANDLINES, GILL NETS

SNAPPER, LANE
RANGE - FLORIDA
GEAR - HANDLINES

SNAPPER, RED
RANGE - TEXAS TO FLORIDA
GEAR - HANDLINES

SNOOK
RANGE - TEXAS TO FLORIDA
GEAR - GILL NETS, HANDLINES, HAUL SEINES

PICTORIAL SECTION

SPADEFISH
RANGE - FLORIDA
GEAR - GILL NETS, TRAMMEL NETS

SPANISH MACKEREL
RANGE - TEXAS TO VIRGINIA
GEAR - GILL NETS, LINES, HAUL SEINES

SPOT
RANGE - GULF OF MEXICO TO MIDDLE ATLANTIC STATES
GEAR - HAUL SEINES, GILL NETS, POUND NETS,
OTTER TRAWLS

SQUAWFISH
RANGE - CALIFORNIA
GEAR - FYKE NETS, GILL NETS

STEELHEAD TROUT
RANGE - OREGON TO ALASKA
GEAR - HAUL SEINES, POUND NETS, GILL NETS,
LINES, DIP NETS

STRIPED BASS
RANGE - NORTH CAROLINA TO NEW ENGLAND, CALIFORNIA
TO OREGON
GEAR - HAUL SEINES, GILL NETS, POUND NETS,
HANDLINES, FYKE NETS

STURGEON
RANGE - COASTAL AND RIVER AREAS
GEAR - GILL NETS, LINES

STURGEON, SHOVELNOSE
RANGE - FRESH-WATER
GEAR - HAUL SEINES, LINES, POUND NETS

SUCKER
RANGE - FRESH-WATER
GEAR - POUND NETS, FYKE NETS, GILL NETS,
HAUL SEINES, TRAP NETS

SUNFISH
RANGE - FRESH-WATER
GEAR - POTS, SEINES, TRAP NETS

SWELLFISH
RANGE - CHESAPEAKE BAY TO MIDDLE ATLANTIC
GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

PICTORIAL SECTION

SWORDFISH
RANGE - NEW ENGLAND AND CALIFORNIA
GEAR - HARPOONS

TRIGGERFISH
RANGE - FLORIDA
GEAR - HANDLINES

TAUTOG
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - POUND NETS, HANDLINES, POTS

TRIPLETAIL
RANGE - FLORIDA
GEAR - HAUL SEINES, GILL NETS, LINES

TENPOUNDER
RANGE - FLORIDA
GEAR - HAUL SEINES

TUNA, ALBACORE
RANGE - PACIFIC COAST
GEAR - LINES

THIMBLE-EYED MACKEREL
RANGE - CHESAPEAKE BAY TO NEW ENGLAND
GEAR - POUND NETS, PURSE SEINES, OTTER TRAWLS

TUNA, BLUEFIN
RANGE - CALIFORNIA, NEW JERSEY TO MAINE
GEAR - PURSE SEINES, LAMPARA NETS, TROLL LINES,
POUND NETS, HARPOONS

TILEFISH
RANGE - MIDDLE ATLANTIC AND NEW ENGLAND STATES
GEAR - LONGLINES, REEF NETS, OTTER TRAWLS

TUNA, LITTLE
RANGE - MASSACHUSETTS TO TEXAS
GEAR - POUND NETS, TROLL LINES, OTTER TRAWLS

TOMCOD
RANGE - PACIFIC COAST, MIDDLE ATLANTIC AND
NEW ENGLAND STATES
GEAR - OTTER TRAWLS, DIP NETS

PICTORIAL SECTION

TUNA, SKIPJACK
RANGE - CALIFORNIA
GEAR - LINES AND PURSE SEINES

TUNA, YELLOWFIN
RANGE - PACIFIC
GEAR - LINES AND PURSE SEINES

WHITE BASS
RANGE - GREAT LAKES
GEAR - TRAP NETS, FYKE NETS, HAUL SEINES,
POUND NETS

WHITEFISH, COMMON
RANGE - GREAT LAKES
GEAR - GILL NETS, POUND NETS, TRAP NETS

WHITEFISH, MENOMINEE
RANGE - ALASKA, GREAT LAKES
GEAR - GILL NETS, HAUL SEINES, TRAP NETS,
POUND NETS

WHITE PERCH
RANGE - NORTH CAROLINA TO MAINE
GEAR - POUND NETS, FYKE NETS, HAUL SEINES

WHITING
RANGE - VIRGINIA TO MAINE
GEAR - OTTER TRAWLS, POUND NETS

WOLFFISH
RANGE - MASSACHUSETTS AND MAINE
GEAR - OTTER TRAWLS, LONGLINES

YELLOW PERCH
RANGE - GREAT LAKES, OTHER LAKES
GEAR - GILL NETS, TRAP NETS, POUND NETS,
FYKE NETS

YELLOW PIKE
RANGE - GREAT LAKES
GEAR - POUND NETS, FYKE NETS, GILL NETS,
TRAP NETS

PICTORIAL SECTION

BLUE CRAB
RANGE - TEXAS TO RHODE ISLAND
GEAR - TROT LINES, POTS, FYKE NETS, DIP NETS,
SCRAPES, DREDGES

STONE CRAB
RANGE - FLORIDA
GEAR - DIP NETS, CRAB POTS

DUNGENESS CRAB
RANGE - PACIFIC COAST STATES AND ALASKA
GEAR - TRAPS

HORSESHOE CRAB
RANGE - MARYLAND TO NEW YORK
GEAR - POUND NETS, WEIRS, BY HAND

KING CRAB
RANGE - ALASKA
GEAR - POTS

FRESH-WATER CRAWFISH
RANGE - RIVERS AND LAKES
GEAR - POTS

ROCK CRAB
RANGE - NEW ENGLAND
GEAR - POTS

SPINY LOBSTER
RANGE - CALIFORNIA AND FLORIDA
GEAR - DIP NETS, POTS, HOOKS

PICTORIAL SECTION

LOBSTER, AMERICAN
 RANGE - VIRGINIA TO MAINE
 GEAR - POTS, OTTER TRAWLS

HARD CLAM
 RANGE - FLORIDA TO MAINE
 GEAR - HOES, DREDGES, TONGS, RAKES, BY HAND

SHRIMP
 RANGE - TEXAS TO NORTH CAROLINA, MAINE,
 CALIFORNIA, WASHINGTON, AND ALASKA
 GEAR - SHRIMP TRAWLS

RAZOR CLAM, PACIFIC
 RANGE - OREGON, WASHINGTON AND ALASKA
 GEAR - SHOVELS

BUTTER CLAM
 RANGE - PACIFIC COAST
 GEAR - SHOVELS

SOFT CLAM
 RANGE - MIDDLE ATLANTIC TO NEW ENGLAND,
 PACIFIC COAST STATES
 GEAR - FORKS, HOES, RAKES, DREDGES

LITTLE NECK CLAM
 RANGE - PACIFIC COAST
 GEAR - SHOVELS

CONCH
 RANGE - FLORIDA TO MAINE
 GEAR - OTTER TRAWLS, DREDGES, POTS, AND BY HAND

PICTORIAL SECTION

LIMPET
RANGE - NEW YORK AND NEW ENGLAND
GEAR - DREDGES

SEA SCALLOP
RANGE - NEW JERSEY TO MAINE
GEAR - DREDGES, OTTER TRAWLS

FRESH-WATER MUSSEL
RANGE - FRESH-WATER STREAMS
GEAR - CROWFOOT BARS, PICKS, HAND

SEA MUSSEL
RANGE - NORTH CAROLINA TO MAINE
GEAR - DREDGES, TONGS, RAKES, HAND

STARFISH
RANGE - ATLANTIC AND PACIFIC COAST
GEAR - HOOKS, SCRAPES, "MOPS"

OYSTER
RANGE - TEXAS TO MASSACHUSETTS, PACIFIC COAST
GEAR - TONGS, DREDGES, RAKES, BY HAND

TERRAPIN
RANGE - TEXAS TO NEW JERSEY
GEAR - HAUL SEINES, BY HAND

BAY SCALLOP
RANGE - FLORIDA TO MASSACHUSETTS, WASHINGTON
GEAR - DREDGES, SCRAPES, PUSH NETS, TONGS, RAKES
DIP NETS

GREEN TURTLE
RANGE - FLORIDA
GEAR - GILL NETS

PICTORIAL SECTION

LOGGERHEAD TURTLE
RANGE - FLORIDA TO NEW JERSEY
GEAR - GILL NETS

FROG
RANGE - FRESH-WATER, MARSHES, POND
GEAR - SPEARS, GRABS

HAWKSBILL TURTLE
RANGE - GULF OF MEXICO, AND ATLANTIC COAST
TO NEW YORK
GEAR - BY HAND, POUND NETS

SQUID
RANGE - VIRGINIA TO MAINE, CALIFORNIA AND
WASHINGTON
GEAR - LAMPARA NETS, GILL NETS, OTTER TRAWLS,
POUND NETS

SOFT-SHELL TURTLE
RANGE - LAKES AND RIVERS
GEAR - HAUL SEINES, FYKE NETS, POTS

SPONGE
RANGE - FLORIDA
GEAR - HOOKS, DIVING OUTFITS

IRISH MOSS
RANGE - NEW ENGLAND
GEAR - RAKES
